ABOUT US

At DINOSAURIER-WERKZEUGE we have been selling special metal forming tools and machines for 25 years. Added to that we have an unbeatable range of blasting cabinets and accessories that leaves every wish fulfilled whether it is for professionals or semi-professionals. In the meantime DINOSAURIER-WERKZEUGE has become a world leading specialist for the mechanical working of metal. We are your dialogue partner for any questions about forming techniques and we are continually enlarging our specialist area. For over ten years we have been offering different restoration-seminars around different themes. We are happy to answer any questions you might have about the courses.

Any price increases that do occur are due to the extremely high cost of steel presently and because of improvements which benefit the customer in the end. Should you find any of our articles offered by other companies, rest assured that the DINOSAURIER quality is unbeatable. For reference please see our various articles about our products i.e.: Oldtimer Markt, No. 4/04 „Restaurierungsseminare“, Special edition 37 „Rollende Restaurierung“, 6/07 „Gute Vorsätze“, No. 9/07 „Hoch hinaus“, No. 12/07 „Hammerfest“, No. 1/08 „Tief-Lieger, No. 5/08 „Schluss mit muffig“, No. 3/2010 „Kreisverkehr“ and more. We do not only sell our products but offer you our unique expertise which we have acquired over many of year. Please test us!

COMPANY BASE

DINOSAURIER-Werkzeuge has it's head office in Osterrade 18a, 21031 Hamburg-Lohbrügge. Coming from Hannover and Lübeck from the A1 please take the exit Hamburg Billstedt and then drive on the B5 towards Bergedorf. After about 2 km you will find the industrial area Lohbrügge on the left hand side. Please let us know in advance if you are planning to drop by, in order that we can arrange for the right person to be available for you.

YOURMOVE AND YOURMOVE-ACADEMY

About 20 years ago Nikolas Aichele came up with the idea to start seminars dealing with the subject of restoration and contacted the chambers of crafts for cooperation, resulting in a wide range of reknown seminars.

DINOSAURIER-WERKZEUGE ist Premium-Sponsor of yourmove. DINOSAURIER-Werkzeuge thus promotes youth and their education. Furthermore subjects like tradition and craft are held alive through this engagement and enable the development of a new job description and live presentations at exhibitions.

NEW RESTORATION-BOOK IN 2 VOLUMES

The new comprehensive reference works for a complete restoration

Old- and Youngtimer Volume 1: Market, Evaluation, Restoration Ethics and Purchase by Marcel Schoch / Matthias Kemmer

Old- und Youngtimer Volume 2: Workshop, sheet metal processing, painting and technology by Marcel Schoch / Nikolas Aichele / Jürgen Book / Matthias Kemmer

PROFESSIONAL
TOOLS

MATERIAL FOR MOLDING+DESIGN

FORMETAL-VARIUS (FLEXMETAL): THE SPECIAL MATERIAL TO MAKE, COPY OR COVER ALL THREE DIMENSIONAL FORMS

FORMETAL-Varius has a soft rhombus-structure and can be worked up very easy. Easy working only by hand when copying or making forms. Manifold possibilities, enormous gaining of surface. Optimal for structural forms, but also usefull for design-and decoration-applications.

-FORMETAL-Varius is available in aluminium. Therefore it is not corrosive and can also be used in outdoor-areas.

-On the cobtrary to normal stretch metal FORMETAL-Varius can be expanded in both axes almost without constriction of one axis. It is possible to extend lengthwise up to 50-100 pct enabling an enormous gain of surface. The material can easily be pushed together and pulled apart. Through this forms can easily be copied or freely formed. This is ideal for figures, models, car parts, prototypes, lamps, design objects of all kinds, as decorating items, for booth building, interior design, sound protection, fitting dormers, hoses. Also to be used as supporting material for plastering and many other occasions.

-FORMETAL-Varius is employed in all industrial sectors (ships, aircraft, cars, synthetic material, electrical engineering, packaging, chemistry), in the building industry, in the DIY sector and in model making, mould making, prototype making etc. FORMETAL-Varius is ideal for sandwich construction and can be covered with a lot of materials, like glas fibre, plaster, foaming material, cover fabrics, carpets etc.

-The form can be captured by the human eye despite construction holes. A finished form can therefore be approved by the contractor before the hardening process.

-FORMETAL-Varius is available in a Medium string structure which can easily be worked on still remaining stable. The material can be annealed in order to soften the structure enabling one to form a face for example. It is possible to correct a form at any time because the material is flexible.

-The max. length of a roll is 10 meter, therefore still it is very easy to handle.

-Pre-cuts of all sizes possible (quantity-dependent), please ask for it.

-Various material thickness and size of mesh-structure possible

-FL 474 AL: Width 600 mm, thickness of material 0,4/0,5 mm, tight size of mesh ca. 6x4 mm.

-FL 608 AL: Width 1.000 mm, thickness of material 0,8 mm, larger size of mesh ca. 10x8 mm.

-FORMETAL will be delivered rolled up. Folds or unevenness which could have resulted from shipping can be easily smoothed out by means of a smooth object: Delivery of pieces and rolls in a carton box by UPS, larger quantities by forwarder on a palette.

-Please ask for quantities over 10 Meter, we will be happy to make you your special offer.

The Special material for three dimensional constructions and forms

Type	Article	Weight per Meter
FL 474 AL-WE20/0,5	FORMETAL-Varius mittelfest, LxBxD=1.000x600x0,4/0,5 mm	235 gr.
FL 608 AL-WE60/0,8	FORMETAL-Varius mittelfest, LxBxD=1.000x1.000x0,8 mm	500 gr.

Easy working, only by hand

FORMETAL[®]

DEEP-DRAWING SHEET METAL

DINOSAURIER COACHWORK DEEP-DRAWING SHEET METAL

The ideal coachwork sheet metal in special deep-drawing quality DC 04 (before ST1403/DD14A) for easy operation (see article about seminars, Zeitschrift Markt, edition 4/2004, page 49).

- The sheets are oiled before selling
- Please be aware that packing costs for sheet metal are relatively high. Best possible way of dispatch, in order not to damage the sheet metal, is by a forwarding company, lying flat on a pallet. Therefore make sure you order larger quantities or organize centralised buying. But of course you can order single sheets.
- Please note that the deep-drawing sheets may show slight bumps or appear uneven on account of the metal being very soft.
- You are very welcomed to pick up the deep-drawing sheets here in Hamburg. In this case please let us know in advance so we can prepare the sheets.
- Selling sheet metal lives from large quantities. Therefore we grant large discounts when ordering big quantities. We would be glad to make you an offer.

**Indispensable consumable material
for the forming technique
Thicker sheets and other materials are also available**

Type	Article
TZB 1411 TA-075	Deep-drawing steel sheet 1.000x1.000x0,75 mm

RE-SHARPENING OF FILES AND TOOLS

TOP INNOVATION OF DINOSAURIER-WERKZEUGE! RE-SHARPENING OF SHRINKING/STRETCHING JAWS AND FILES!

DINOSAURIER TOOLS has developed a method to resharpen old, worn shrinking/stretching jaws and files! **Absolute world novelty!**

- The method was tested very successfully on professional and industrial jaws and files. This jaws and files with high quality (hardness from approximately 58 HRC) are sharper than before sharpening. For soft hobby-jaws it may be a rounding of the teeth, however, as this inferior quality cannot withstand the process, please see diagram below
- Jaws no matter of which fabric can be reworked - though should be tested in the respective case
- Through the special process, the rounded teeth are ground sharp, the surface again embellished and compacted, some rust is removed. Defects in the teeth or jaws (footprints, fractures, deep abrasions etc.) can not be processed and will remain the same (usually this does not matter, since only the surface engagement with the teeth necessary and defects will be bridged)
- No guarantee is granted on the jaws and the duration of the resharpening because of used parts
- In case of return please only send disassembled jaws back (not the entire tool if possible) and please note your name on the jaws using an Edding. Attention: The reworking process will probably take a couple of months (the resharpening of single jaws is economically not possible)
- The existing level of hardness of the jaws and filing remains
- Resource and environmentally friendly and sustainable, maintenance of partially expensive products

Save a lot of money by resharpening your shrinking/stretching jaws and files with the globally unique DINOSAURIER resharpening process

**Unique:
-Gentle sharpening
method
-Teeth will be much
sharper than before
processing**

**TOP
INNOVATION**

Type	Article	Quantity
NSH 1370 PIN1	Resharpen of 1 piece of square professional or industrial-shrinking/stretching jaw (LxBxH ca. 42x25x38 mm) as used in SG 200 P, SG 900 P, SG 1300 P and SG 1450 SSPI2	1 piece
NSH 1375 PIN4	Resharpen of 1 set (4 jaws) of square professional or industrial-shrinking/stretching jaw (LxBxH each jaw ca. 42x25x38 mm) as used in SG 200 P, SG 900 P, SG 1300 P and SG 1450 SSPI2	4 pieces
NSH 1380 PIN10	Resharpen of 1 piece of half-round or round professional or industrial-shrinking/stretching jaw (LxBxH ca. 40x20 mm, a pair are two pieces), f.e. upper or lower part of ST 3010 IN, ST 3020 OU, ST 3010 INN31 und ST 3020 OUN32	1 piece
NSH 1382 PIN12	Resharpen of 1 piece of round professional or industrial-shrinking/stretching jaw (LxBxH ca. 54x37 mm, a pair are two pieces), f.e. upper or lower part of ST 1610 IN8 oder ST 1620 OU8 (also Eckold-tools are possible)	1 piece
NSH 1320 FEN2	Resharpen of 1 piece of file (both sides, breath ca. 30-40 mm, length ca. 300-350 mm)	1 piece

DINOSAURIER-SHRINKER&STRETCHER

TOP
NEWS

New versions of the worldwide known DINOSAURIER shrinking-stretching technique!

- Reasonably priced hobby models, professional models for higher demands and high quality industry models mark out the range of the DINOSAURIER shrinking and stretching tools and all this for a reasonable price!
- Thousand fold approved by professionals and semi-professionals, in the industry, in training colleges, in the chambers of handicrafts and in use worldwide!
- To make wheel hubs, window frames, door edges, rain guards, guttering etc. To be used on metal covered roofs, in ship and aircraft construction, to produce lettering, sculptures etc.
- Hardly any imprints and folds visible on the material due to the special jaws.
- Combination models (2 complete bodies) make work easier and are unbeatable in time saving and easy handling. No changing of tools necessary - the parts no longer get lost. Regulation of mistakes is made easy and two people can work at the same time! Many advantages for an extra low cost!
- NEW: Also different sized jaws available for even less imprints on the sheet metal. If required, please inquire.

SHRINKERS & STRETCHERS

SHRINKER/STRETCHER HOBBY AND STANDARD

The shrinker/stretcher for hobby workers (SG 010 SN1+SG 900 S-1N, only for hobby work! Normal basic quality found on the market with quick wearing of the tools and relatively high amount of reworking) and Semi-prof (SG 010 S+SG 900 SP-2+SG 1200 SP3+SG 1400 SSP).

-Prices is absolutely unbeatable! A price that has never been so low!

-For steel of up to about 1.1mm, Aluminium up to ca. 1.5 mm (depending on the working depth).

-SG 010 SN1+SG 900 S-1N: Simple Hobby-Models, SG 010 SN1 with short handle

-SG 010 S+SG 900 SP-2: Standard-versions with better jaws/tools!

-SG 1200 SP3+SG 1400 SSP: Top-new Standard.models with maximum working depth! Stronger body and better tools than Hobby-models. Special stand deliverable. The best choice!

-SG 015 SNK1+SG 015 SK+SG 915 SP-2K+SG 1215 SPK3+SG 1415 SSPK: Combination models as ideal additions for quick and uncomplicated working. Includes 2 bodies, 2 levers and 1 shrinking+1 stretching tool. No changing of replacement jaws is necessary. Two people can work at the same time. Breakage of tools through dropping them is no longer possible.

In the Hobby-shrinking/stretching devices, the new DINOSAURIER industry jaws STB 1300 INN1 (shrinking) and STB 1320 OUN6 (stretching) to be retrofitted.

SHRINKERS & STRETCHERS PLIERS

THE NEW DINOSAURIER SHRINKING/STRETCHING PLIERS LIGHT MODELS WITH ALUMINIUM CONSTRUCTION!

NEW! The DINOSAURIER-Shrinking/Stretching-pliers for the Hobby-and Professional User

New light and handy versions making it fantastically perfect for use as hand pliers on the roof

-Quick and easy changing of tools through special screw locks.

-**LxTxH** = ca. 800x60x120 mm, max. working depth 40 mm, SG 1000 ZGN/1015 ZGNK 45 mm

-**SG 500 ZS1**: Standard pliers with oval Shrinking/stretching tools, for soft metal up to 1,0

mm, Aluminium up to ca. 1,2 mm, chromated to 72 HRC, weight 3,2 kg (combination 5,3 kg).

-**SG 700 ZSN2**: Standard-professional pliers with oval Shrinking/stretching tools, for soft metal up to 1,0

mm, Aluminium up to ca. 1,2 mm, weight 3,3 kg (combination 5,4 kg).

-**SG 1000 ZGN**: Professional-pliers with round Shrinking/stretching tools, Top-Professional model with reinforced steel holder, delivery incl. round industrial tools of the highest quality, larger back opening for pushing through of higher material, for soft metal up to 1,0 mm, Aluminium up to ca. 1,5 mm, weight 3,8 kg (combination 7,1 kg).

-**SG 515 ZSK1, 715 ZSNK2, 1015 ZGNK**: Combination model as an ideal completion for quick and uncomplicated working. Includes 2 plier bodies, 2 levers and 1 shrinking+1 stretching tool. No more changing of jaws necessary. Two people can work at the same time. Breakage of tools through dropping no longer happens.

-**GZ 550 ZS1, GZ 750 ZSN2, GZ 1300 SG**: Single pliers without tools, to upgrade your existing shrinking/stretching pliers into a combination model

-**SF 1500 SG**: Special stand with special adapter, available for stationary use in garages or on the scaffolding as a fixed shrinker/stretcher.

The new DINOSAURIER-Pliers, a must for all building plumbers

ACCESSORIES FOR SHRINKER/STRETCHER PROF+INDUSTRY

The strong, round DINOSAURIER-Industry-tools for your Shrinking/stretching machines

- Robust, new industrial tools with further improved quality
- The round, massive industrial shrinking/stretching tools, see eg use in the DINOSAURIER-shrinking/stretching pliers SG 1000 ZGN / ZGNK.
- NEW! Stroke now right up to the edge for a better grip/work!
- Because of the small and sturdy construction, also narrow and small sheets can be processed accurately and easily up to 2.0 mm.
- The Use is also possible in your own equipment, such as presses, power-formers, Pullmax or all machines which can be adjusted in the height.

DINOSAURIER-SICKENMASCHINEN

Extension of DINOSAURIER-swaging/beading-technology!

- DINOSAURIER-swaging machines for the car plumber
- SM 600 PPH: Massive device, thereby also processing of thick materials possible, however reinforcement of machines for thicker sheets wasily possible
- Machine with large working depth (450+630 mm) for vehicles (also pre-war vehicles), trucks and buses. For the production of connecting and deepening swages, bulged and flat metal, for example floor panels, bonnets, door skins, tanks etc.
- With only one machine: beading, flanging, folding and cutting is possible.
- Guidance fences for exact guidance of long and straight sheets
- Blank mandrels available for making individual mandrel sets

Essential for every metal worker, whether professional or semi-professional!

*Please ask for our
range of mandrel
sets for most
other car-swaging/
beading machines*

EQUIPMENT FOR SWAGING MACHINES

Innovative accessories for swaging machines from DINOSAURIER-WERKZEUGE

- ESM 610 MO1**: vocomplete engine set to make a manual swaging machine to an electrical version. Made for use with the SM 600 PPH, simply screw on the holes provided. When used to other swaging machine like SM 110 SAN, expected to have changes to the recording and bracket are made.
- AKW 035 SM+EWP 670 AKW**: NEW: New special mandrel set for bending up of folds of 90°, i.e. for sideways flanging up at fenders, door outside egdes, window edges etc.
- SHW 037 SM+EWP 671 SHW**: NEW: New special mandrel set for finishing the 90° fold, done with the AKW 035 SM+EWP 670 AKW, Top-Innovation from our seminar manager.

Make work easier through the right swaging equipment.

SWAGING MACHINE STANDARD

SWAGING MACHINE FOR CAR PLUMBERS 450 MM

Super priced swaging machine for the semi-professional and professional use, unbeatable price!

- Revised, improved model with bushings for optimal use
- Deep throat of 450 mm for sheets over 900 mm, weight 27 kg
- For steel sheets up to 1.2 mm, upgrade for thicker materials possible
- Comes complete incl. 6 pieces of mandrel sets: 3 pieces round mandrels ca. 7/10/13 mm (height each ca. 3 mm), 3 pieces flanging/bending mandrels height ca. 1/2/6 mm
- EWS 115 BW: Standard-cutting mandrel set, usable on two sides, regrind possible
- RW 010-019 SM: Round mandrel sets 3-30 mm (in 3 mm distance) for deep round beads
- KW 021 SM: Step/box mandrel set 13,5 mm
- SW 030+031 SM: Flanging mandrel sets 2/4 mm
- AW 032 SM: Folding mandrel set 65°
- ASW 034 SM: Combination mandrel set. Flanging 2 mm and folding 65°. Can be turned
- AKW 035 SM: NEW: New special mandrel set for bending up of folds of 90°
- BW 036 SM: Professional mandrel set, alloyed tool steel, very sharp-edged
- SHW 037 SM: NEW: New special mandrel set for finishing the 90° fold, done with the AKW 035 SM
- PW 040 SM: Blank mandrel set for turning your own bead shapes
- AFS 050 SAB+AFS 050 SBM1 The guidance fences are recommendable for all swages for producing perfect long and even swages.
- SF 480 NO2: Solid stand, ground mounting to advise

WHEELING MACHINES

Expansion of the DINOSAURIER-wheeling mashine technology! New models, new special industrial rolls!

-For making rounded sheet metal, concave and convex, flat and round; of any size. On fenders, bonnets, doors, roofs etc. For use on cars, or also round roofs and bulges in metal house roofs. Furthermore for making ship planks, aircraft parts, sculptures, knights armours etc.

-It is easy to reinforce the machines for larger material thicknesses because it is simple reinforceable welded constructions! Cast versions also available. Steel machines have no disadvantages compared to

versions made of cast iron, because with the processing of deep-drawn sheet usually no such high pressure is needed and the machines almost can only be used for finishing.

-Attention: Perfect metal sheets cannot be created with hobby forming rolls! For finishing then it's best to use our industrial synthetic rolls. The new, DINOSAURIER shaped rolls revolutionize the roll stretching machine technology. Different special synthetic rolls of German production, which enable streak-free, perfect work.

In addition, sources of error in finishing are also almost impossible for semi-professionals.

-Wheeling kits and complete models of all variations available, also other versions.

Essential for every metal worker, professional or semi-professional

New industrial-forming rolls made out of special synthetic In different materials and hardness available

FORMETAL-Variuos: The new and simple method for taking/molding old parts. When beating out a large car part it is advisable to use a

mould. This is normally made of wood and requires good skills. A new and easier method is to use FORMETAL (see right). FORMETAL can be strengthened with glass fibre etc. The sheet metal can be driven into this construction.

It is a simple and fast method which can also be used by semi-professionals

WHEELING MACHINE STANDARD-PROFESSIONAL NEW EXTREMELY REINFORCED MODEL WITH BEAUTIFUL ROUNDED SHAPE

Ideal dimensions and reinforced, improved konstruktion

-New, massive model with beautiful curved frame profile

For the use of all 75-mm-lower rolls, included the new DINOSAURIER-synthetic rolls

-Standard-Prof. model with 5 pieces of standard-Lower rolls, ideale entry level model at a best price-performance ratio (tested many times, also in seminars), weight ca. 130 kg, LxTxH = 955x732x1.546 mm

-Working dedth ca. 750 mm for sheets over 1.500 mm (therefore also suitable for door panels etc.). Working height ca. 550 mm.

-For steel of about ca. 1,2 mm, Alu of about 1,9 mm

Nicely shaped and revised for flexible use of all lower forming rolls

All 75 mm lower rolls can be used in this machine, which means maximum flexibility!

Type	Article: Stand model Standard
RM 750 SPB5	Stand model incl. 5 pieces Standard-lower rolls, reinforced and improved design

The new Industrial-synthetic-rolls:
KF 702 OPP60-1000+KF 704 OPPH60-1000

RM 750 SPB5 ideal, affordable entry-level model for the flexible user

FORMING TECHNIQUE

WHEELING MACHINES

WHEELING MACHINE PROFESSIONAL ORIGINAL FROM DINOSAURIER-WERKZEUGE

The big professional machine with the optimal working depth for all sheets

- Great working depth of 1.040 mm, for sheets of to 2.000 mm.
- Professional stand model with upper Standard-wheel and 5 pieces of lower Standard-steel rolls
- For steel of about ca. 1,2 mm, Alu of about 1,9 mm Strengthening of the construction possible in order to work with thicker material, weight ca. 140 kg, LxTxH = 1.320x680x1.790 mm
- Delivery of with complete stand with revolvable upper wheel of 90°, handling device for lift truck and streps for floor mounting, complete stamp with foot control to adjust the work pressure, quick lever mechanism, device on the side to adjust the lower rolls
- Wall assembly possible though attaching industrial hing joints at the back of the machine or thorns on top and at the bottom of the backward steel construction. The machine can then be folded away saving space

The perfect wheeling machine for each use and garage
Please ask us for a special offer with
your complete favourite set

Type	Article: Wheeling machine Prof.
RM 1100 NTV5	Stand model Prof. with 5 pieces of lower Standard-forming steel rolls

NEW: MASSIVE WHEELING MACHINE PROFESSIONAL

The new DINOSAURIER-wheeling machine für huge and massive claims!

- Heavy and very solid built steel frame
- Huge working space: Working width 1.140 mm!, Working height 950 mm!, for the largest sheets
- Delivery incl. 4 pieces upper Standard-wheels (1 piece for wheeling and for flanging with the corresponding lower roll and 3 pieces to work out different, wide swages/ beads with the corresponding lower rolls) and 10 pieces lower Standard-rolls (6 pieces of different radii For wheeling, 1 piece for flanging and 3 pieces to work out swages/beads)
- Complete equipment: Upper wheel 90° rotation, upper wheel easily replaceable, lower rolls also to 90° rotatable through special construction, thus to use in all directions, special quick release for lower rolls, device for lifting by a forklift or crane, quick lifting construction of the frame, holes for ground mounting.

The Top-New DINOSAURIER-wheeling machine
for massive claims!

WHEELING MACHINES PARTS

The revolution in forming material with English wheels. The new DINOSAURIER industrial special synthetic rollers for finishing for your English wheel, German industrial CNC manufacturing

Take advantage of the elemental benefits of synthetic over steel. The new DINOSAURIER synthetic rollers are made of high quality, special industrial synthetic of different hardness. These have an enormous surface resistance/hardness, but are softer than steel rollers. The Top-trainers in the restoration area Thomas Geis and George Wendel have tested the roles and are thrilled.

- With steel rollers, the rough shape continues to be produced, the DINOSAURIER industry-molded synthetic rollers are then used for perfect finishing.
- Synthetic rollers prevent error while rolling and plaining/finishing. With correct application developed forms will not be stretched further (as is the case with steel rollers), the prepared form remains. Too much pressure when rolling out of plates with a steel roller leads to an unwanted stretching effect, which will again change the form of the sheet produced. With the synthetic rolls also the less experienced users can easily work more professionally. "The user can make no errors anymore when finishing" says Georg Wendel, restoration Top-trainer.
- Synthetic rolls will leave less imprints on the sheet metal than steel wheels because they are softer and the work surface is considerably wider (steel rollers can lie only selectively)
- Synthetic rolls are not additionally hardened and can thus easily be refinished later (either in-house or working on DINOSAURIER-WERKZEUGE).
- The synthetic rolls can also be used in simple hobby-stretching machines. In this case, the top roller wheel hobby can in most cases remain in the machine, enormous cost savings. Until now when using the less professional or industrial-rolls the upper wheel had to be replaced in accordance with higher quality expenses.
- The synthetic rolls fit into all DINOSAURIER professional stretching machines or corresponding replicas. The width of the rolls is commercially available 75 mm. the mount axle measures have a square and a round side, so they fit in nearly all recordings
- KF 702 OPP2-60+120+300+1000:** Hard special synthetic version, very rugged, color natural, weight with/without axle 594/408 gr. These hard synthetic forming rolls yield, if used to a top steel wheel. It arises a larger contact area, which results in a larger working area. The synthetic rolls return after work back to it's original shape. Ideal for all finishing operations.
- KF 704 OPPH2-60+120+300+1000+Flat:** Even more hard than 702-versions, very rigid. Also can be used instead of steel wheels for wheeling out.
- KF 722 APM4-120+APM8-1000:** Medium soft special-synthetic rolls, color black, weight with/without axle 620/436 gr. This rolls more yield than the hard-synthetic rolls, the contact surface again increase. Perfect for further fine-finishing operations
- KF 742 UPV2-60:** Super soft elastomer industry-synthetic roll, color natural yellow at delivery. Sophisticated forming roll: Something for specialists ensuring absolute perfect finishing work
- KFR 940 OPPW:** Upper wheel made of special synthetic, hard version, very rugged, color natural, outside diameter 195 mm, width 75

The innovation of DINOSAURIER-WERKZEUGE in the future of the forming/stretching technique!

Type	Special-Synthetic rolls and wheels industry

ROLLFORMING MACHINES

Expansion of DINOSAURIER-rollforming machines-technique!

- 3-roller-rollforming-machines to make all round parts like tubes, cones, cylinders etc.
- Rounded sheets can easily be removed from the machine by swinging out the front roller, some conical works are also possible.
- Mainly with wire grooves, upon request with horizontal slits in the upper roller.
- It is very important not to use thicker material than indicated by the manufacturer, the rollers will bend through the middle otherwise. Always over estimate for the dimensions by about 0.2 mm.
- Please ask for the DINOSAURIER-special info about rollforming including plenty of tips.

Die DINOSAURIER-Rollforming-machines for every application!

ROLLFORMING MACHINES HOBBY+STAND. FOR CONICAL WORK

Handy hobby+standard models for the occasional use, ideal for the modeller, building site use, exhibition constructor etc. and for limited spaces

- Small roller diameter, therefore optimal also for fine working (exhaust pipes etc).
- Simple, solid construction, smearing with smearing nipple possible.
- Front and back roller adjustable, **therefore also conical working is possible!**
- Upper roller can be lifted to easily take out rounded sheet metal.
- With horizontal slit in the upper roller. This function is needed for narrow round profiles with an even diameter. (metal fits snugly around)
- Also stands available on request
- RB 610 MB2/1,0: Improved Standard version

Reasonable in price,
ideal for easy working

Type	Working-width	Dia-meter	Mater. Thickn.	Weight
RB 300 MB	305 mm	26 mm	0,8 mm	14 kg
RB 610 MB2/1,0	610 mm	38 mm	1,0 mm	38 kg
RB 1000 MB	1.010 mm	50 mm	1,0 mm	86 kg
RB 1300 MB	1.300 mm	75 mm	1,5 mm	200 kg

Conical working possible!

ROLLFORMING MACHINE STANDARD/PROF FOR THICK SHEETS

Handy Hobby model for occasional work with thicker material

- Solid construction to be fixed in a bench vice or to a work bench
- For steel up to 2,0 mm, because made out of steel (not casted)
- Upper roll issuable for easy removal of the rounded plates (pipes)
- 4 insert-groovings, conical working possible

Cheap to buy, ideal for flexible working

Type	Working-width	Mater. Thickn.	Weight
RBP 300/2,0 PPN4	305 mm	2,0 mm	13 kg

ROLLFORMING MACHINE PROF. SMALL VERSION 300 MM

The new TOP-Professional-Rollforming machine 300 mm from DINOSAURIER

- NEW! Small professional machines with 300 mm working width for thicker metal sheets up to 3,0 mm (with narrow metal sheets), otherwise 1,0 mm over the whole length
- Ideal for small, hard jobs, schools, building sites etc.
- To be fixed in a bench vice or to a work bench
- Insert-groovings for 1-5 mm, conical working possible
- Upper roll issuable for easy removal of the rounded plates (pipes)
- Rolls are grinded very fine and made of hard special steel (900 MPa)
- With horizontal insertion slit in the top roll (for narrow work)

LEATHER BAGS FOR BEATING AND FINISHING OF SHEET METAL

LS 200 SP1+LS 250 PR4+LS 350 PQ3 delivery without filling. Use find sand to fill.

-LS 100+LS 120 SK2: Leather bags are filled with steel balls, as an alternative beating helper or as a flexible holder when forming metal. Please see report Oldtimer-Markt 12/07, pages 50-55

-LS 200 SP1: Size 450 mm Leather bag hobby (comes without sand) as perfect pad for hammering, finishing and shaping of metal sheets. The sand sack should be filled with fine sand and has a velcro opening. Has withstood the test of time in schools etc.

-LS 250 PR4+LS 350 PQ3: As before, but professional versions. LS 250 PR4 round 460 mm, LS 350 PQ3 square 460x460 mm, these bulgs allows for a larger sand volume in the sack, which results in a bigger working space and more robust side which makes them more longliving. The hole for letting in the sand is integrated into the side-bulge. The leather sand sacks have an additional sewed on leather-bulge

-ESV 200 AFSA: Insert device for AFL 100 LS1 with a foot to be screwed onto a work bench or something similar. Also usable for anvil SA 050

-AFL 100 LS1: Solid, round working space 480 mm with insert device makes it a perfect to drive out sheet metals. To insert in square profiles or clamping into a bench vice

-SF 150 LS3: Special-Stand for the use of big leather bags for detached use, diameter of surface 480 mm, height 855 mm, weight 23,5 kg

**Super quality at a super price,
essential for every metal worker.**

WOODEN HAMMER / MALLETS

HAMMERS / MALLETS FOR BEATING SHEET METAL, NEW VERSIONS!

- HH 255 SH2: New standard hammer with improved quality for occasional use
- HH 260 SHP5: New Standard-Prof-hammer improved in special version, good weight of 492 gr.
- HH 310 PHP4: New professional hammer made of special plywood, top alternative to the lignum vitae without conservation problems, the same density as Lignum Vitae, can however be made larger so that the hammer head weight increases, handle made of ash wood, high weight of about 696 gr.
- HH 320 PHP5: New professional hammer made of special plywood, **Top model with bamboo handle made of solid material (a must of all professionals)** otherwise like HH 310 PHP4, high weight of about 706 gr.
- EGB 320 PH+321 PH1: Bamboo handles with different cavities (stable, but not as durable as EGB 322 PH2), extremely stable type of bamboo, for all hammer usable, diameter ca. 23-27 mm, length ca. 280 mm, Please watch out: A bamboo handle is never straight, as it is a natural product (stronger bows are also possible)
- EGB 322 PH2: Bamboo handle with full material **(as full material cavities up to ca. 3 mm are meant, very rare and therefore extremely resistant)** to retrofit your hammer Diameter 23-27 mm, length ca. 330-360 mm.

A professional hammer is essential for continuous working since it is easy to your joints. A heavy hammer head with a flexible bamboo handle is very important (a wooden handle, like used for standard hammers, is inflexible and conveys the knocks onto the joints)

HAMMERS, DOLLIES & ACCESSORIES

BLOW-BACK PROOF HAMMERS

Blow-back proof hammers are used when working on filigree parts in order to protect them. Part of the impact is absorbed by the hammer and deformation of the parts is avoided.

Used for adjusting small parts i.e. decoration batten (Zierleisten) etc., adjusting gear boxes and bushings, Opening and closing of quick fasteners on old wheels, assembly of precision parts, punching in of ball bearings, for use on polished and finished parts etc.

SPECIAL-EXPANDING FACILITIES DINOSAURIER

These expanding facilities have been specially developed for our seminars in order to beat out forms much faster and learn the basics of forming technique much quicker and easier. The working techniques can be learnt in our yourmove-academy seminars „basics of forming technique“. These expanding facility are also very useful for any garage-they save a lot of time.

-**SAT 200 TBR**: Bumping tube round steel 76 mm diameter to beat out round bendings and hollows like apertures, door handle-hutches etc., Full material with fixing foot to be fixed to a bench vice. Length: 60/80 mm

-**SAT 220 RST**: Round stöckle made of full material with welded bead for round work pieces. Diameter 60 mm, Length 62/152 mm

-**SAT 240 LRS**: Long square stöckle made of full material with welded bead for oblong work pieces. Measurement: LxWxH = 240x30x40/90 mm

NEW DINOSAURIER-WHEEL-ARCH-STENCIL

The new DINOSAURIER-Wheel Arch Stencil, exclusive from DINOSAURIER-WERKZEUGE
The simple way to a perfect result

- Enormous time saving, assistance and quality intensification
- Helpful tool to repair a deformed wheel arch or to build an entirely new one
- Identical procedures through measurable precision
- Make an accurate line to repair the circular border edge on wheel arches.
- Easy tools like ruler, folding rule, circle or sliding calliper are no longer needed
- Following steps can easily be done by using exactly the same measure. Once the measurements have been set they can be used over and over again.
- Less material is needed through exact recovery, saves tin and putty
- The DINOSAURIER-wheel arch stencil can be used whilst flattening, tinning, filling, grinding, priming and varnishing

This wheel arch stencil belongs into every garage – not only in bodywork- and varnishing companies. Also indispensable for private use

SMALL PARTS TO MEASURE

CONTURE MEASURER

Unending number of uses! For measuring vehicle forms, dents and damage, plaster forms, door and window frames, footboards, cornices, pipes, furniture, step forms etc. for restorers, builders, do-it-yourselfer, sculptors, potters, mould makers, modellers, plasterers etc. Exact and quick form transformation from uneven contours

- ZB 2070 KA:** Robust, torsion-resistant design made of plastic. Both sides usable, side magnets, scaling in mm and inches. Perfect for quick removing flatter shapes, plastic pens stay better in the removed one position, can be extended by yourself
- ZB 2075 KA2:** As ZB 2070 KA, however new continuous version with 509 mm working width, made from one piece, therefore much more robust than ZB 2070 KA and no risk of breakage if used correctly
- KA 145 ZB1:** Small and simple contour measurer with steel needles
- KA 400 ZB2+1000 ZB5:** Professional moulds in a box. Length of a mould 200 mm, can be made endlessly longer. Change of direction can be adjusted with a folding square/angle which is plugged in between.

The multi talents for all forms at a super price

THE NEW DINOSAURIER-WHEELARCH-EXPANDING DEVICES

The DINOSAUR wheel arch expanders for fender flares. When used correctly, a smooth, flanged edge is obtained without permanent damage to the paint structure. Ideal for occasional use in workshops but also in the hobby area

- For creating and displaying fender edges (e.g. at lowering and installation of wider tires)
- For 4 and 5 hole wheel hubs of approx. 95-120 mm bolt circle, spindle adjustable by 90°
- Delivery incl. 5 washers for the spindle (this constructions are susceptible to wear and therefore must be checked continuously)
- Lever arm of the form roller can be swiveled through 180° (the adjustment must be done carefully, as the construction against the wheel arch edges and damage the vehicle)
- Devices without CE-approval, light and simple construction
- RLA 100 STDN1R**: Hobby model, wheel hub late with 8 oblong holes length 33 mm, width 12,7 mm, diameter spindle 11,7 mm, length rotary lever 287 mm (with plastic grip balls at the ends), extension arm can be extended by ca. 130 mm, synthetic-roll (width 50 mm, diameter 50 mm), LxBxH (extension arm inside) 555x287x230 mm
- RLA 100 STDN2**: Standard model improved, wheel hub late with 8 oblong holes length 25 mm, 5 of these with a width of 15 mm and 3 Pieces with a width of 13 mm), diameter spindle 16 mm, length Rotary lever 240 mm (with plastic grip balls at the ends), extension arm can be extended by, synthetic-roll (width 70 mm, diameter 80 mm), LxBxH (extension arm inside)=535x240x250 mm,

Fender flares made easy, possible without damage to the paintwork

INSPECTION-AND CONTROL MIRROR NEW VERSION WITH LIGHT LED-LIGHTING

The ideal tool when searching for problem cases and defects, detection of rust, inspection of parts in the automotive industry, at the construction site as well as at home

- Long, extendable telescopic arm, thus no bending necessary and the sighting deep areas possible
- Ideal mirror size, large enough to see something, but also suitable for narrow areas
- Special hinge, thus the mirror is horizontally pivotable about 250 ° and vertical 360 °
- Light LED lighting, even in daylight is still a light output available
- Small and easy to store, even in your pocket, for example, on construction sites, etc.

Inspection easily made, whether in the industrial, commercial or private use

Type	Article	Mirror size	Total length
ZB 2080 ISP2	Inspection-and control mirror with stainless steel-telescope and LED-lighting , telescopic arm extendable from 320-765 mm, total length von 430-875 mm	64x42 mm	430-875 mm

Inspect and control in a simple way

360° vertical rotatable

250° horizontal rotatable

Uniqueness:
 - Long telescopic arm
 - LED-lighting
 - Swiveling 250°/360°
 - Cheap price

Backlighting and checking of nooks and crannies

Illuminating and checking of vehicle floors etc.

Backlighting and testing of narrow and difficult to access places

SMALL PARTS

HAND-RIVET PLIERS FOR SYNTHETIC RIVETS

The modern way of Riveters for plastic riveted parts

- Handy rivet pliers as resistant construction steel in narrow areas
- For attaching plastic riveted vehicle parts such as bumpers, inner fender
- To be used in many car brands (many German brands) whether young or old.
- Existing, rusted metal compounds can be replaced by plastic rivets
- Advantages of the plastic versions: No metal chips, fallen or cutted parts could in difficult or inaccessible cavities remain (no risk of rust)

The practical and handy hand-rivet pliers at an affordable price

Type	Article	Rivet sizes	Includes	Weight
NIZ 150 PL2	Rivet pliers made out of steel for plastic rivets, Delivery includes: rivet pliers LxBxH=150x123x45 mm and plastic rivets 10 pieces 5x17,2 mm +10 pieces 6,3x25,2 mm	5,0 mm 6,3 mm	Rivet pliers+ 20 rivets	366 gr.

TINNING + GRINDING

ACCESSORIES FOR TINNING AND FILING

The most important of materials can be acquired by us. For filing tin the vehicle body builder's file is the most commonly used tool. Cheap and effective but a little rougher is the steel file ZB 1120 FH. Linseed oil or cable fat (do not use soldering fat) for coating the beech wood spatula can be cheaply purchased by a specialised dealer that's why we also do not stock them in our range.

- VP 210 VZS: Tinning paste 250 gr., S-Pb60Sn40, leaded.
- VP 220 VZSB1: Tinning paste 250 gr., S-Sn97Cu3, lead free
- ZSF 230 VZSDR: Tinn stack with 25% tinn, does not run as easily therefore better to work with
- ZSF 235 VZS2DR: Tinn stack lead free
- HZ 1965 BS: Set of tinn timbers, 5 pieces, professional
- ZB 1120 FH: Robust steel file for removing soft materials like putty or tin etc. The grater is much rougher than a vehicle body builder's file.
- ZB 1010 FF: Body file complete: File holder with file blade standard 350 mm, usable on both sides
- ZB 1040 FF2: New, improved Top-body file holder, non slip handle rotatable
- For file blades of different lengths
- ZB 1057 FBI1: Nee industrial file blade 350 mm, highest quality, usable on both sides

DINOSAURIER FILE-TECHNIQUE

**WITH DINOSAURIER-WERKZEUGE IN A NEW DIMENSION!
THE GREAT VARIETY OF INDUSTRIAL DINOSAURIER FILES
DINOSAURIER ALSO DEVELOPED A NEW METHOD FOR REGRINDING
YOUR FILE!**

The large selection of new files
-Own production in Western Europe, no goods from Far East
-Always consistent and highest quality
-High hardness for long term use
-No variations in hardness anymore, therefore also for professional and industrial users
-On special request chromating possible for a hardness up to 72 HRC!
-Resharpener of files with a new special system possible
-Despite highest possible quality, low prices

**The wide variety of DINOSAURIER industry-files!
Take advantage of the revolutionary resharpener of files!**

**Top EU-Quality
No Far-East
products**

**The new DINOSAURIER
regrinding process!
- New development
- high quality
regrind Files
- Environmentally
friendly
- Protective resources**

DINOSAURIER SPOTTER KITS

THE NEW GREAT PRICED DINOSAURIER-SPOTTER-KITS!

- Spotter kits, new Top-models, color red
- 230 V, 50 Hz, 3 V/2.500 A, 0,8 kW bei 50% (2 kW bei 70%, max. welding power 5,5 kW)
- LxBxH (case)=597x393x140 mm, LxBxH (Spotter without electric wire)=285x99,8x230 mm
- EU-Prof. model with CE-approval, no cheap Far-East products
- Supplied in a practical transport case and accessories: 7 pieces elektrodes, 1 piece tow hook standard for washers, 100 pieces nails 2x50 mm, 100 pieces nails 2,5x50 mm, 100 pieces copper screws M4x16, 100 pieces rivets M4x15, 50 pieces washers diameter 16 mm
- SPK 100 KIT**: Improved version, can also be retrofitted with the accessories for use be retrofitted with fixed shaft wire. Please inquire if necessary
- SPK 150 KIT2Z**: Additional with accessories for the use of „Wellenfixdraht“

Complete Spotter Kits for professionals!

Type	Article	Weight
SPK 100 KIT	Spot welder, revised version, delivery incl. standard slide hammer	10,5 kg
SPK 150 KIT2Z	Super spot welder kit, NEW!, with special dent removal accessories, delivery including special slide hammer, magnetic positioner for fixed shaft wire, electrode for fixed shaft wire, 10 pieces of fixed shaft wire made of copper, each 350 mm long, pulling claw with 4 fingers, pulling hook for washers and fixed shaft wire	10,8 kg

Spotter gun with electrodes

Uniqueness: Prof. Spotter-Kits with complete equipment at a great price! No cheap Import

Lots of accessories available, also for upgrading the normal Spotter Kits SPK 100 KIT

Type	Article/accessories for SPK 100 KIT to upgrade and for SPK 150 KIT2Z	Weight

DINOSAURIER WELDING EQUIPMENT

THE NEW DINOSAURIER SPOT WELDING GUNS

DINOSAURIER-WERKZEUGE offers two professional spot welding guns at an affordable price. In the restoration of cars these guns are indispensable. In the courses of forming technique at the yourmove-Akademie handling is practiced

- TEC-7900 HSZ1:** Manually operated professional spot welding gun 2 kVA, 400 Volt 50Hz, for body shops and repair work. Lightweight Model. Electronic synchronous timer, compensation-circle (starts the timer only when current is flowing at the welding point, therefore excellent results when welding on partial painted metal sheets oxidized parts or galvanized sheets), pressure setting with scale, high quality transformer
- TEC-7902 HSZ2:** As before however with 2,5 kVA and timer (control with welding current control for welding of particularly thin sheets, thin wires, stainless steel sheets etc.).

Spot welding done conveniently,
all types and sizes available

MULTIPURPOSE-MAGNETS AS ANGLE MAGNETS NEW TOP VERSIONS WITH THE LARGEST SIDE LENGTH

Can be used for welding, soldering, assembling cabinets, marking, pipe installations, separating stacked steel sheets, collecting chips, etc. Can also be used as a pulling aid.

- Magnets adhere to all iron objects
- Welding and holding aids, both hands free to work ("the third hand")
- Large, centered hole for gripping and easy handling
- The magnet can be affected by intense heat and should therefore be removed after the use to be removed as soon as possible
- The new MG 300 with an even larger magnet side length of 116 mm and a larger pull holding force. The extra large angle magnet (weight 1,190 gr.!) at a great price.

The perfect Welding-and Holding-Helpers, for industry, craft or private

Type	Article	Draw help max.	Magnet side length
MG 200	Welding-angle magnet, strong version, weight 672 gr., LxBxH= 157x102x17,5 mm, side length 90 mm, angles 30°+45°+75°+90°+135°, can also be used as a pulling aid (crane aid) up to max. 25 kg (55 lbs.)	25 kg	90 mm
MG 300	Welding-angle magnet, extra strong version , weight 1.190 gr., LxBxH= 200x128x20 mm, magnet-side length 116 mm, largest model available , angles 30°+45°+75°+90°+135°, can also be used as a pulling aid (crane aid) up to max. 30 kg (66 lbs.)	30 kg	116 mm

MG 300 + MG 200

Uniqueness MG 300:
- Magnet side length 116 mm!
- Magnet-weight 1.190 gr.

DINOSAURIER WELDING EQUIPMENT

WELDING AIDS TO BUTT WELDING AND OVERLAP WELDING NEW SPECIAL-TOP VERSIONS

- Usable for welding, soldering, gluing parts etc.
- Welding and holding aids, both hands free to work (the third hand)
- WG 110 SP2+WG 150 PP5:** Welding grips for butt joint welding. Hold the metal sheet exactly when butt joint welded, also in round forms with a gap of approx. 1 mm (distance when gas-welding). This pin is removed after welding on the back of the sheet for reuse (it would remain there in inaccessible cavities).
- WG 120 PP2:** can also be used in inaccessible cavities, since no lost of parts!
Also suitable for use for the overlapping welding and for holding sheets together
- WG 150 PP5:** Through special screw construction can also be different thick sheets are welded together! (f.e. 0,75 mm to 1,2 mm)

The WG 120 PP2 and WG 150 PP5 as new versions with greater diversity of use and still better processing. New professional models with a perfect finish at top prices.

- ZWG 380 KLZ:** Clamping pliers, solo, for welding clamping pins, high-quality cast design with exact clamping jaw holder (clamping pins sit firmly in the pliers and tilt not, pliers don't wobble, Thomas Geis from the vehicle academy recommends this pliers as the best on the market), including non-slip handle coating
- WG 310 SKS7:** Welding clamp pins for inaccessible cavities (no loss of components).
Simply drill a hole and insert the pin into the hole
- WG 320 SKB8:** Welding clamp jaws for border area, function as WG 120 PP2

The perfect Welding-and Holding-Helpers, for craft or private

DINOSAURIER CLEANING GUNS

THE NEW DINOSAURIER-CLEANING GUNS IMPROVED AND LOWER WEAR IMPULS TECHNOLOGY!

Please also see our report „Schluss mit muffig“ in the Oldtimer-Markt No. 5-08, pages 56-61.

- Suitable for cleaning of door skills and sheetings, dashboards, car polsters, roofliners, heatersventilation shaft, replacement parts, wheel rims, tools, cornices, bath areas, bicycles, motor-cycles, etc. And all general difficult accessibles places.
- For removing of dirt, robust oil, surface film etc.
- Because of the micro spraying the wastage of cleaning material is very low, so it is financial very cheap. In case of emergency it is possible to use water if the item doesn't allow otherwise.
- It is very simple to use: Fill water with cleaning material into the storage tank, connect the air pressure with the lower pistol grip, finish. The impulse nozzle revolves by air supply. This causes that the liquid drwas of the tank and sprays.
- Turn over the green switch lever between the storage tank and the pistol grip for a stainless drying
- Z 010 TWS1**: Previous model with higher wear, therefore only for private use suitable. Hobby model for private users with a slightly smaller compressor
- Z 020 TWS2**: New professional model with extremely wear-resistant technology than the simple Z 010 TWS1, therefore much cheaper to use in the long run. Funnel, inside hose and outboard hose does not have to be constantly replaced because the parts no longer touch. Top-professional model for all demanding users with a slightly smaller compressor
- Z 100 TWS3**: Like Z 020 TWS2, but with much higher performance. The special front attachment bundles the force more, so that you can better and easier can work at deeper places, e.g. rims, columns etc. If the corresponding compressor is available, absolutely the first choice of all impulse cleaning guns.
- SKB 620 RP**: Cleaning brush, wooden handle, one side tapering and rough bristles for rub approx. 50 mm long, other side soft bristles for sweeping

Simplest cleaning, for the private use whether for industry

BODY CAVITY PROTECTION

THE BODY CAVITY PROTECTION TEST WINNER THE GOOD CHARACTERISTICS OF OIL, FAT AND WAX UNITED IN ONE PRODUCT: THE BEST PROTECTION AGAINST RUST!

Our rust protection TimeMAX ist test winner! First prize in the body cavity protection endurance test held by the magazine Oldtimer Markt (No. 9/2009). Apart from the unbeatable protection effect against rust, the testers very especially impressed by the excellent penetrability and the good adhesion on vertical areas: „TimeMAX, the test winner...left rust no chance“.

- Ideally suited to protect restored and non-restored (with rust) classic cars, Oldtimers, Youngtimers but also for new cars (unfortunately also new cars rust very easily)
- Best body cavity protection for blank, rusted and varnished sheet metal, application not only through certified specialists but also though hobbyists.
- 100% active component, no dissolvent, therefore no drying-out or cracking.
- For applicated all three materials are heated up to 100 degrees. Processing should be done with a pressure cup spray gun at max. 6 bar (please see previous page). It is also possible to apply the product with a paint brush, advisable thickness 1mm
- TimeMAX 1000 Speed: A rust preventative with extreme penetrability for delicate seams and cracks. Ideal also to be used with strong rust and for rusted body cavities on the underbody, that are not heated by the sun in the same way. (i.e.sills and arbors at the bottom of the vehicle)
- TimeMAX 2000 Protect: Body cavity universal material for all vehicles. Proper long term protection, works similar to a zinc coating ex factory. 2000 Protect can be used for all purposes. It offers an abrasion-proof layer against rust. Cracks and damages heal by themselves through the penetrability of the material.
- SPD 3300 HSS2: The perfect pressure gun for spraying out cavities.

Uniqueness:
The best rust protection for your vehicle. Tested and found to be very good

Price reduction! Due to oncreased production, the price could be reduced significantly!

Only the best products for your car-proven by the endurance test!

Type	Artcle	Contai-ner size

Also perfect for application to the sub-floor

SMALL PARTS

DINOSAURIER PARTS WASHER

PARTS WASHER

Simple cleaning up dirty parts. We advise the use of water-soluble washing emulsions (Attention: The cleaning emulsions must not attack rubber and plastics, otherwise the pump may break down). **Models incl. CE-approval.**

-Simple but effective models with a circulating cleaning principle. The pump in the lower part of the machine forces the washing liquid up and over into a flexible steel hose and onto the object.

The pump filter is replaceable. There is a removable tray and a basket for small parts (not on the table model TW100 ADP). All models have a self securing lid in case of fire.

-Professional model with an air pressure system and a blow-through pistol (not TW 100 ADP) for quick and perfect jobs. Includes an improved pump and a strengthened T-joint on the flexible hose. Delivery includes flow-brush TW 010 D. Can be continuously used.

-**TW 010 D+TW 015 DN:** The flow-brushes allow simple and perfect work.

-**DP 010+DP 010 CM1+DP 015P:** Solo-pumps for similar parts washer

-**DP 020 H+DP 025 HE+DP 026 CM2:** pUmp units for fitting in other parts washing systems: DP 020 H (for ADP) pneumatic, incl. extra air gun, DP 025 HE+DP 026 CM2 electric without gun

Simple cleaning of parts, indispensable for professional and semi-professionals

DINOSAURIER BENDING FOIL

BENDING FOILS AGAINST SCRATCHES OR FLEXURAL TRACKS IN THE SHEET METAL BENDING OF SHEETS

Ideal if sheets to be bended should receive no scratches, marks, shadows, bending lines or more upper-surface damage, most important example in aluminum, stainless steel, coated or painted surfaces. Usable in all press brakes, bending machines, press brakes.

- Delivery from the roll from 1 running meter. The prices refer to one meter
- The foils can also various irregularities (imprints, scratches, nicks, etc., as with most conventional folding machines, especially in simple and cheap models, to bridge the bending beam, the ABF 150 / 0.4 FGK1 only small irregularities, the ABF 95 / 0.8 FGK2 somewhat larger bumps

Clean folds for perfect sheets

Picture left shows typical marks of a fold, right image without calling for use of bending foils

Finally clean bendings with the bevels durable bending foils

Type	Article	Width of foil	Thick-ness of foil
ABF 150/0,4 FGK1	It is best to use the press brake film on press brakes with relatively clean beams. However, it can also be used if there are very slight scoring or unevenness in the beams, as is common with many folding machines: When bending, no scoring is visible in the sheet metal, sometimes compensate unevenness in the folding beams, even smaller marks are no longer visible, but still slightly noticeable (however, compared to a bend without foil significantly less), little more springback when bending than without foil, only a slight increase in pressure when bending is noticeable, the bending radius is apparently hardly rounder than with a bend without foil, foil can be used at the same bending point for up to approx. 30 bends	150 mm	0,4 mm
ABF 95/0,8 FGK2	Bending foil can also be used on folding machines with relatively unclean beams (with various impressions, grooves, notches, etc., as is common with most simple folding machines): Also compensate unevenness in the folding rail of the upper beam or the bending beam (with smaller bumps or impressions in the cheeks apparently completely bridging them), even marks are no longer visible comparing to ABF 150/0,4 FGK1, more spring-back when bending than without foil, only a slight increase in pressure when bending is noticeable, the bending radius is apparently hardly rounder than using ABF 150/0,4 FGK1, foil can be used at the same bending point for up to approx. 30 bends	95 mm	0,8 mm

Insert the bending foil in a press brake

Uniqueness:
- Bending without traces
- Durable foil
- Cheap price

Foil from the roll, from 1 lfdm. available

SPECIAL ITEMS

BENDING MACHINES MOBILE

-A folder is the simple version of a bending machine. Bending operates with muscle power without any extra help. Therefore folders are limited by the width or the strength of the material. Bending machines are a lot more massive and heavier than folders. The sheet metal is pressed onto the upper beam by way of spindles using a turning wheel and this way held during the bending process. The grip is much stronger than with the hand and therefore much wider or stronger material can be bent. The simpler and lighter a model is, the more inexact the performance will be, because the beam starts sagging. Low weight means inexact work results, only strong weight leads to exact results. Therefore cheap models entail high quality losses.
-The data corresponding to material thickness is for deep drawing metal and must be strictly held to by the user! Please make sure that if you are using the maximum thickness indicated you should only do so only as an exception and not as the rule. Please never fold thicker metal than indicated - not even once. A bending machine is laid out only for the indicated material thickness, otherwise it will break in the middle and cannot function properly any more. Sheet metal cannot be folded any more and parts could even break off. A bending machine should always be bought with a much higher dimension of min. 0.2-0,4 mm (the more the better) than actually needed
-To save transport costs the legs + some of the levers are detached and need to be screwed on upon delivery.

ABP 200-2 ST4

PRESS BRAKES FOR MOUNTING IN A BENCH VISE

Flexible bending helpers for clamping in a vice. Ideal for narrow working conditions, work fast and to edit thick sheets

-Bending up to about 90°, easy, quick and perfect priced
-ABP 100-2 ST1+125-2 ST2+200-2 ST4: Versions incl. segments with magnet for sticking to the jaws of the vices

Ideal job aids, small, flexible and low priced!

Type	Working-width	Material Thckn.	Weight
ABP 100-2 ST1	100 mm	2,0 mm	1 kg
ABP 125-2 ST2	125 mm	2,0 mm	1,5 kg
ABP 200-2 ST4	200 mm	2,0 mm	2,5 kg

FOLDERS STANDARD FOR ASSEMBLY ONTO A WORK BENCH

Mobile folders hobby for occasional, universal use on building sites (assembly on roofs and scaffolds etc. possible) and in workshops, for hobby workers, to be used as simple and cheap basic model also for the professional

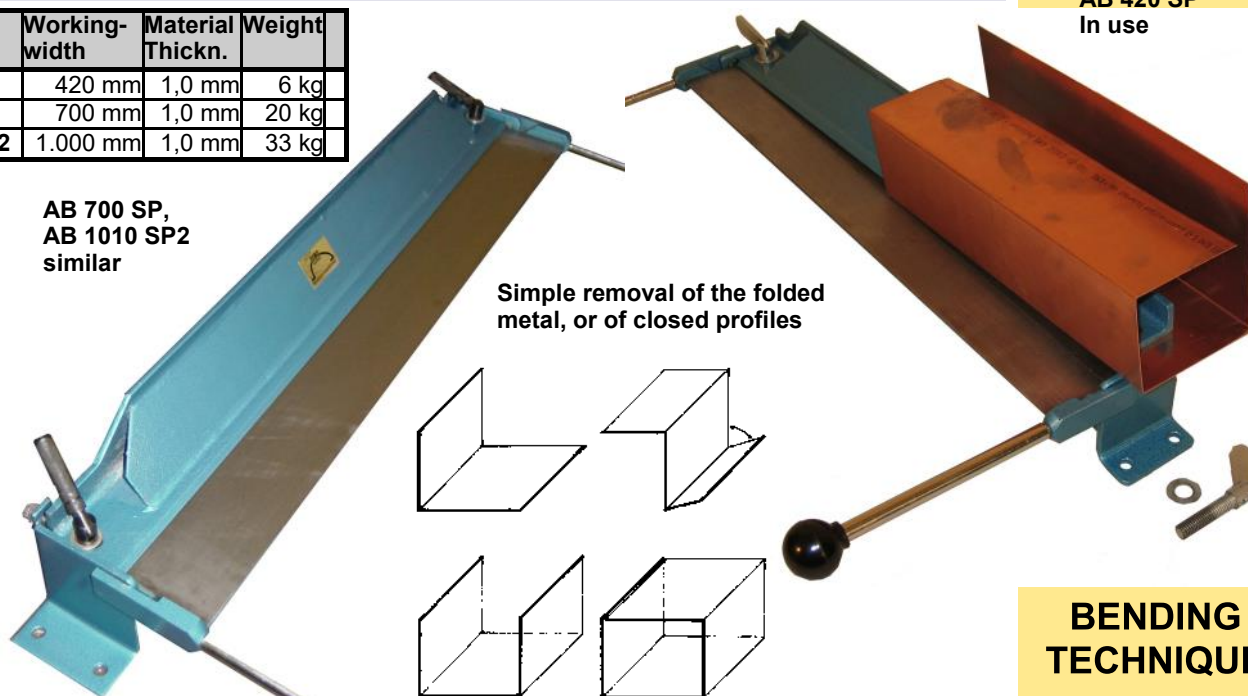

-Upper beam can be lifted up so that the side production of closed profiles is possible
-Assemble onto a workbench by using both side flaps and screw the clamps tight.
Assembly on a table is more stable than in a vice
-Detachable handles, save space when being stored away
-Easy adjustment of upper beam to different material thicknesses.
-Upper beam rises up when opening via springs automatically
-AB 1010 SP2: New model, filigree worked for a better result

Perfect price - performance relationship, an essential for everyone!

Please note the DINOSAURIER special information on bending with many tips!

EXCENTER-FOLDING BENCHES STANDARD WITH STAND IDEAL FOR EVERY WORKSHOP AND USE ON CONSTRUCTION SITES

The ideal folding benches with stand at an affordable price

- AB 1010 PE2N: Light version, therefore easy to implement. Optimal also for use on construction sites, as it is handy and lightweight, unscrewable stand, cheapest stand model
- AB 1060 HPN1: Stable version for heavy tasks. The exact guides on the upper beam are replaceable, delivery incl. Angle bending limit and strengthened bending beam

Bending made low priced, whether in commercial or private

Type	Article	Working-width	Material Thickn.	Weight
AB 1010 PE2N	Light version	1.016 mm	1,0 mm	69 kg
AB 1060 HPN1	Stable version	1.060 mm	1,4 mm	120 kg

The new folding benches with stand: Folding made cheap!

NEW! EXCENTER-BENDING MACHINES STANDARD-PROF FOR THICKER MATERIALS WITH A LOT OF ACCESSORIES

The new solid folding bench with stand frame at an affordable price-performance ratio

- AB 1000/2,0 PGE1: Heavy steel version for sheets up to 2.0 mm, upper beam stroke 48 mm, delivery incl. rear support bracket and 2 pieces of carrying handle, pull rod on the bending beam handle, adjustable lower beam, upper beam adjustable above twist grips (also possible with clamped sheet metal)
- AB 2000/1,2 PGE4: Long stable folding bench up to 2.100 mm working length up to 1,2 mm sheets, also longer versions with 2.600x0,8 mm and 3.100x0,7 mm available

Innovative bending at the perfect price

STABLE CASTED SPINDLE BENDING MACHINE PROFESSIONAL FOR HEAVY WORK

Massively built spindle bending machines professional for heavy work!

- Adjustable lower beam for use with different material strengths.
- Angles up to 135° possible
- Upper beam is kept in place with spindles on the side (much bigger as an excenter machine and the metal easier to keep in place making the work easier) Adjustment of the upper beam by use of a large wheel.
- The rails of the bending beam are replaceable
- NEW! Ideal professional models for high expectations and professional work.
- Heavy versions made out of cast

SEGMENT-BENDING MACHINES

SEGMENT BENDING MACHINES - THE SMALL SERIES

Mobile-bending machines for universal use on building sites, for model makers etc.

-Segment benders hobby with upper beam with many segments (details see below) for occasional use, ideal for all profiles also boxes etc.

-High upper beam for high angled U -profiles.

-Upper beam can be pulled up with both excenters.

-Upper beam can be adjusted to various material thicknesses with the Excenter screws.

-**AB 300 MS+600 MS2:** With less inch-segments

-**AB 610 MS:** Improved version with 9 mm-segments, ca. 15/15/20/30/40/80/80/160/170 mm

SEGMENT-BENDING MACHINES

SEGMENT BENDING MACHINE 610 MM WITH 3 PART SEGMENTING!

Mobile bending machine for universal use on construction sites and for model making etc. The perfect version for the construction worker!

Simple construction

- More segments on the upper beam, bending beam and lower beam: 10 segments ca. 10/15/15/20/30/40/80/80/160/160 mm.
- High upper beam for high angled U-profiles.
- Upper beam opening over two sided Excenter.
- Upper beam re-settable with special Excenter screws: for different metal strengths

Reasonably priced segment-bending machine for construction sites etc.

Type	Working-width	Material Thickn.	Weight

Three beam segmenting to an unbeatable price

THE DINOSAURIER SEGMENT- BENDING MACHINES HOBBY

Models Hobby-Standard basic construction (professional models below) three fold segmented (upper beams, bending beams and fixed lower beams) Ideal for construction workers, car body workers, sign makers, aeroplane builders etc

- AB 1010 BS/1,0 for working on thin metal: ideal for construction sites, without foot control
- AB 1100 BS/1.5 the robust model for metal up to 1.5 mm! Incl. foot control with pedal
- Also for the production of coverings for ledges and connections etc. from steel or stainless steel
- Optimum segments on upper beams, bending beams and lower beams and the fixed lower beam
- Extensive special fittings with an adjustable bending beam for different metal strengths, an angle measurer and angle limit

The segment bending machine for all metal solutions at the optimum price!

HAND SHEARS + NIBBLER

THE DINOSAURIER FIGURE METAL SHEARS

Figure shears are mainly used to cut fine, narrow radiuses on the edge of sheet metal. You can also make very narrow figures and cut curves. Straight cuts should be short, here it is better to use continuous shears

- The handles have a colourful recessed plastic covering for comfortable working.
- The shears are with a screw (no ratchet) therefore they are also replaceable.
- The head of the shears are from stainless steel. Professional shears also available with shear head in special high quality steel
- Micro toothing of the shears prevents a possible slipping, perfect for very fine jobs
- BS 100 GE+101 LI+102 RE:** Standard figure shears, very good quality despite the best price
See article Markt-Special-edition No.37
- BS 150 GEB+151 LIB+152 REB:** Professional figure shears for very small radiuses

DINOSAURIER-CONTINUOUS-HAND SHEARS

Continuous shears are mainly used for long, continuous cuts, i.e. to cut a sheet panel. No suitable to cut narrow radiuses or curves.

- The handles have a colourful recessed plastic covering for comfortable working.
- The shears are with a screw (no ratchet) therefore they are also replaceable.
- Effective lever transmission, shear heads angled
- Also suitable to cut mesh wire, plastic material, floor covering etc.
- Micro toothing of the shears prevents a possible slipping, ideal for sheet metal work
- BS 201 LIP+202 REP:** Standard continuous shear with very high quality despite low price.
shear heads made of high quality steel. See report Markt-Sonderheft No.37
- BS 301 LPK+302 RPK: NEW:** Small professional pass scissors for tight radii, super handy, a must for everyone sheet metal processing, ergo handles for fatigue-free work
- BS 501 LDS+502 RDS:** Professional continuous shears with shear heads made of high quality steel (very durable).

NIBBLER + ROLL SHEARS

ROUNDCUTS AS SINGLE PUNCH SHEARS

Cutting sheets in all directions, without twisting the sheet, almost free of burrs

- Perfect and simple cutting of all straight and round shapes. Absolutely flexible in the hand, nearly all types of difficult shapes can be cut with it.
- Perfect for all difficult cases, for vehicles, DIY, building etc.
- Also cuts paper, plastic, plexi-glass, carpets, PVC, Linoleum etc. up to 1.2 mm material thickness, effortless and trouble free an real multi- talented tools!
- The roundcut can also be used in the middle of the metal, for which purpose a small hole of ca. 13 mm must be drilled.
- NBR 350 SP2**: Standard version, nibbler use on both sides (thus double nibbler), delivery incl. complete spare nibbler head, spare nibbler needle for double use, opening key and practical storage steel case (including carrying lever)
- NBR 370 SP3**: As before, however, with nibbler on one side and sawing device on the other

Highest flexibility, it cuts nearly everything and can be fitted onto a drill!

CUTTING TECHNIQUE

DINOSAURIER-BLAST TECHNIQUE

DINOSAURIER BLASTING CABINETS

- Dry blasting cabinets for cleaning, removing rust, fat, carbon, roughness, ridges, refining, condensing, polishing, making surfaces matt, stabilising etc. (Industry models for daily use on request)
- Our tip! Protect the glass and keep the lighting from blinding you by placing a DINOSAURIER-protective folio or plastic plate in under the glass.
- The inside mass is not automatically the same as the working space. Construction slants and sometimes the lighting must be included in the calculation.
- Be aware that for blasting more compression is needed than for other air pressure work. Too small a compressor will not bring the desired air pressure or blasting result. In the case of compressors that serve a complete workshop, it must be noted that, purely mathematically, 450 L / min are required to provide a work station.
- Blasting cabinets are never absolutely sealed. In some cases they must be re-sealed depending on the needs of the user. We recommend a light sound proofing material to help prevent the volume of noise. Blasting cabinets should not be placed in living areas or near sensitive machines. For fine dust a suction unit like AS 280 P must be used.
- All blasting cabinets work with a blasting material returning system. The blasting material is shaken into the funnel and from there sucked back into the blasting gun. After use the blasting material falls back into the funnel and gets sucked back up again. To exchange or clean the blasting material it can be let out at the bottom of the funnel. Bench models are constructed with a flat funnel for less blasting material.
- Please note that the operation of a blasting cabin including foot control requires a blast stop (door shutdown when opening) on the doors. Our blasting cabins are only with hand blasting gun delivered. If you retrofit a foot control with a blasting head, the user must retrofit the cabin with an approved blasting stop on the doors.
- All of our blasting cabinets are delivered in a box or carton and the remaining parts must be screwed on.

DINOSAURIER-WERKZEUGE now delivers optimal blasting material

BENCH MODEL FOR SMALL JOBS WITH TOP LOADING

- New improved model for blasting many small parts.
- It is limited by the flat funnel but is useful for the small or occasional job.
- Ideal for model makers or for limited spaces because of top loading facility.
- Small, light, handy machines for an extremely attractive price.
- Improved version with blasting room from the top door, strengthened tray and new improved aluminium blasting gun.
- Extensive accessories: Blasting gloves, gun, lighting, several replacement foils and replacement nozzles and standard suction unit AS 040 S (SK 200 HP)

Ideal for saving money and easy to use

BLAST CABINETS HOBBY+STANDARD

BLAST CABINETS HOBBY WITH CE-APPROVAL

Revised models from the previous page with full CE approval

- Solid CE blasting cabinets for the occasional user, at an extremely attractive price.
- SK 200 H/CE+HP/CE and SK 500 H/CE with internal 12-Volt-lighting
- SK 500 HN2/CE with external 230-Volt-lighting (2x18 Watt fluorescent tubes, 2x1.350lm)
- Fully equipped including blasting gloves according to the PPE directive, new improved blasting gun, replacement protective films and replacement blasting nozzles, exhaust help AS 040 S at SK 200 HP/CE

Fully usable as CE models, at an unbeatable low price

Type	Inside dimensions „b x t x h“	Outside dimensions „b x t x h“	Required air consumption per min.	Weight
SK 200 H/CE	585x485x350 mm	590x490x475 mm	350 l/min at 6,0 bar	22 kg
SK 200 HP/CE	585x485x350 mm	590x490x475 mm	350 l/min at 6,0 bar	23 kg
SK 500 H/CE	860x560x560 mm	980x630x1390 mm	350 l/min at 6,0 bar	50 kg
SK 510 HN2/CE	860x560x560 mm	980x630x1390 mm	350 l/min at 6,0 bar	53 kg

NEW: SK 200 H/CE+
HP/CE und SK 500 H/CE+
SK 510 HN2/CE incl.
complete CE-
approval, therefore
universally applicable

MASSIVE STANDMODELLE STANDARD

Solid professional blasting cabinets with a large, deep funnel and a huge blasting area. Solid designs for occasional use. Delivery in special transport cases, to be completed on arrival. Attention: This blast cabinets are delivered without CE-approval.

- Large lighting boxes with neon lights set above to give the best lighting possibility in the cabinet. Very good working conditions in the cabinet.
- Delivery of all cabinets, besides the CE-models, incl. blast head with 4 pieces ceramic nozzles, foot control and pressure regulator with manometer and spare foils.
- SK 1345 NBA+SK 1545 NBA5: Delivery incl. strong, electrical suction unit with large filter cartridge and manual shaker. Very powerful, but not suitable for fine dust and continuous operation (motor can quickly overheat)
- SK 1340 NB/1345 NBA: Two side doors for the easy loading and pushing through of long parts. The front viewing panel folds up completely which makes cleaning easier and also the replacement of protective folios. It is also easier to load small parts from the front of the cabinet. Valve to exchange air and blasting abrasive as well as for adjusting blasting abrasive mixture.
- SK 1545 NBA5: NEW! Very big new model with huge blasting area and big front door. Delivery incl. strong, electrical suction unit. (Not for fine dust + durable use)

The massiv blasting cabinets for a super price-performance relationship

Type	Inside dimensions „b x t x h“	Outside dimensions „b x t x h“	Required air consumption per min.	Weight
SK 1340 NB	1.220x605x585 mm	1.350x640x1.680 mm	400 l/min at 6,0 bar	125 kg

BLAST CABINETS STANDARD

STANDARD MODELS WITH BASIC EQUIPMENT, INCL. CE OUR DINOSAURIER-SPECIAL RANGE OF ECONOMY MODELS

Inexpensive space saving model standard for the occasional use.

Optimal blasting chamber dimensions.

-Comprehensive, general equipment: Includes a lighter aluminium gun which requires less air pressure (a smaller compressor is required), six special ceramic nozzles, high quality latex-gloves, vastly improved halogen lighting for better visibility (SK 1200 HS with double lightening), 4 pieces protection plexiglass windows, new diversion tray to lead the blasting material back into the funnel, outside adapter for attaching the compressor, new improved hoses, suction help AS 040 S (not suitable for fine dust and only for very little dust, no sealing of the cabin possible, color red).

-SK 300 HS: Bench model with stand and flat funnel an large top door (means that the loading of objects is simple. Plus easier cleaning of the viewing window and replacement of protective folios is possible). Very good for saving space! Only the width of the blasting cubicle must be available as space!

-SK 600+700+1200 HS: Stand models with deep funnel and two side doors for easy loading and for pushing through longer pieces, viewing window that can be folded back for easier cleaning and the replacement of folios

The favorable models with improved basic equipment

BLASTING CABINETS STANDARD-PROF.

THE NEW DINOSAURIER-BLAST CABINETS WITH PROFESSIONAL EQUIPMENT AND CE-APPROVAL!

The top-equipped standard blasting cabins with professional equipment! With and without extraction available in two different designs (side door + front door versions)!

-Delivery almost completely pre-assembled (for reasons of shipping security, please screw on the maintenance unit and suction adapter after delivery) and thus almost immediately ready for use.

Including a solid base frame, professional hand blasting gun, professional blasting gloves according to the PPE directive, improved 230 volt lighting (2x18 watt fluorescent tubes, 1,350 lm), protective films for viewing and light windows

-Extensive additional equipment such as professional pressure reducer with water separator and manometer, 58 mm suction adapter for connecting an extractor, cover / baffle plate in front of the suction hole, cleaning brush for cleaning the blasting material

-Air consumption at 6 bar with 6 mm blasting nozzle/3 mm air nozzle=500 L/min.

-2 pieces of large pass-through openings at the front (Inner diameter 175 mm)

-**SK 1360 NB/CE4+SK 1365 NBA/CE5:** Versions with 2 side doors (ca. opening dim. 508x495/280 mm) for simply pushing long parts and top cover (opening dim. 1.169x345 mm), for loading small parts and easy changing of the protective films. Viewing window 580x270 mm, working height until the middle of the gloves 1.100 mm, inner space LxBxH=1.220x605x585(350) mm, outside LxBxH=1.320x660x1.645 mm

-**SK 1560 NB/CE8+1565 NBA/CE9:** Versions with large front door (opening dim. measured obliquely ca. 960x750 mm) for easy insertion of large and heavy parts, right and left compression springs for holding the front flap (must be checked continuously for safety), viewing window 695x320 mm, working height until the middle of the gloves 1.125 mm, inner space LxBxH=1.177x887x847 mm, outside LxBxH=1.330x1.240x1.770 mm

-All blasting cabinets as a complete delivery but without compressor and blasting material

-Please note: Due to the size of the article, slight defects in the paint can occur during construction, assembly and packaging

BLASTING CABINETS PROFESSIONAL

THE NEW DINOSAURIER-BLAST CABINETS PROFESSIONAL WITH DREAMLIKE INTERIOR DIMENSIONS AND CE-APPROVAL!

Novelty: The top-new professional blasting cabinets in solid design with two side doors!

- Delivery almost completely pre-assembled (for reasons of shipping security, small add-on parts may have to be re-assembled) and thus ready for use almost immediately
- Special construction with a steep viewing window to enlarge the blasting area
- Huge interior dim. of approx. 1.200x1.000x.1000 mm, therefore also suitable for very large components
- Very massive design with massive grate for components up to 250 kg
- Storage rack in two parts, asymmetrically divided, for easy lifting out
- Incl. special rotary safety switch on the doors, for the use of blasting heads with foot control
- 2 large access openings at the front (inner diameter 175 mm)
- Extensive additional equipment such as professional pressure reducer with water separator and pressure gauge, suction adapter for connecting a suction, cover / baffle plate behind the suction hole, additional exhaust air opening (can also be used as an additional suction opening), adjustable ventilation slots, 2 pieces of LED lamps, set of protective films, professional blast gloves
- SK 1260 PP5A:** Incl. prof. hand gun SP 150 P and durable blast nozzle boron carbide ED 150 BO
- SK 1270 PP5B:** Incl. prof. blast head SP 500 P durable blast nozzle ED 500 WO-6 and foot control SKB 450 FBN,
- Optional accessories:** F.e. prof. extractor AS 280 P, prof. rotary table SKB 620 DT2
- Air consumption at 6 bar with 6 mm blast nozzle/3 mm air nozzle ca. 500 L/min.
- Please note: Due to the size of the article, slight defects in the paint can occur during construction, assembly and packaging

The new blasting cabinets professional with a perfectly constructed blasting room!

BLASTING TECHNIQUE

SUCTIONS HOBBY + STANDARD

CHEAP PRICED SUCTION UNITS FOR ALL BLAST CABINETS

- AS 040 S:** Pneumatic suction aid, only suitable to create a slightly better view in small cabins with little dust, not for sealing a cabin, delivery without filter or filter bag (order EP 84511 AW11 or ELD 821 BTS1 if required)
- AS 200 PMSA:** Pneumatic-Hobby-suction helps. Only ideal for occasional use, not suitable for fine dust (blows dust in the air circulation when surcharged).
- AS 500 PAD:** A strong performing electrical hobby suction unit with manual shaker. The suction unit can be mounted directly onto the blasting cabinet or nearby i.e. on the wall. Not suitable for fine dust (it would be blown out through the top) and continuous use (engine would overheat).
- AS 600 PEL2:** NEW! Standard professional electric suction unit, powerful 1200 watt model, suitable for fine dust to a certain extent, complete for direct flange mounting on a blasting cabinet or attachment to a wall (then plan spacers to the wall and additional hose), delivery including filter basket, carrying handle, drain screw connection on the funnel below and mounting plate, LxWxH = 730x300x310 mm, including CE approval
- ESK 210 FIAS:** Small filter complete for attaching in the inside of blast cabinets
- EP 84511 AW11+ELD 821 BTS1:** Blast grit collecting bag, for example for attachment to AS 040 S (must be slightly cut open at the opening)
- EAS 510 MO:** Elektric motor/engine of AS 500 PAD. Also usable to build up an own suction
- ELF 590 PAD:** Air filter of AS 500 PAD. Also usable to build up an own suction

For every blasting cabinet there is a reasonably priced suction unit!

BLASTING
TECHNIQUE

SODA-BLASTING TECHNOLOGY NEW

THE NEW DINOSAURIER CONVENIENT SODA/NATRON BLASTING GUNS FOR USE WITH SMALL AND MEDIUM-SIZED COMPRESSORS!

Soda/Natron Blasting is a new, gentle cleaning process for removing paint, dirt, mold, fire damage etc. Environmentally friendly blasting of vehicles, and in houses, on boats, furniture, etc. The surface with the soda blasting is not heated and thus not damaged (no distortion), glass, rubber, or chromium may also be blast. The cleaning effect is produced by the discharge of the surface tension of the individual grain upon impact, thus no sharp-edged and compacted character. Soda blasting is used both in dry and wet blasting process. In the wet blasting process a small amount of water is added at the nozzle (atomization), thus creating a higher density for a more effective and dust poorer beam method.

Another advantage of dry blasting: When used correctly, the surface is then protected against oxidation for a short time (approx. 2 weeks). When wet blasting, the surface is very susceptible to oxidation due to the water content.

TIP: The best way to vacuum the high-quality blasting material is to reuse it. For small parts, the pneumatic suction ESP 710 RSV1 can be used, for poorly accessible areas, use an ash vacuum or industrial vacuum! Due to the high dust accumulation when blasting with sodium, the dust accumulation can also be reduced

-ideal for gentle work-up of aluminum and castings: Engine, transmission, attachments, brakes, carburetor, etc. With appropriate sealing even the blasting of motors in installed condition possible.

Working up only low air consumption

-Furthermore, you can also strip paint. A slow-jet method, during which coatings can be removed individually. For paint removal, however, increased air consumption necessary.

-For derusting Soda blasting is poorly suited (maximum surface removal)

-SP 700 SOD2: Standard professional version with basic equipment

-SP 705 NAD3: Professional version with professional equipment (delivery incl. Precision nozzle, flat nozzle made of plastic, compressed air quick adapter and 700 gr. Container with blasting media for initial use)

-ESP 710 RSV1: Suction device (slightly shaky with SP 705), can be used immediately after mounting (consists of compressed air suction unit, brush / nozzle holder, suction bag and brush attachment), Note: 4 pieces of rubber nozzles (soft rubber) can also be supplied for different applications

-Used is a special blasting agent sodium bicarbonate (,two different types and grits) available in three different container sizes, 0,7 kg in a small bottle, 5 kg in a canister and 25 kg in a special bag

SODA-BLASTING TECHNOLOGY NEW

THE NEW DINOSAURIER CONVENIENT SODA/NATRON BLASTING GUNS FOR USE WITH SMALL AND MEDIUM-SIZED COMPRESSORS!

NEW: Strong professional injector soda blasting guns and soda blasting device for processing larger areas. The higher the air output, the stronger and faster the removal. For even faster work for very large areas, sodium pressure blasting units are also available

TIP: The best way to vacuum the high-quality blasting material is to reuse it. Due to the high dust accumulation when blasting with sodium, the dust accumulation can also be reduced.

Special suckbacks are in preparation, please ask if you are interested.

-Inexpensive soda blasting with small to medium-sized compressors!

-Low air consumption for dry soda blasting thanks to injector technology (suction process)

-SP 860 NAD6: New standard professional soda blasting gun with a lot of power and basic equipment, delivery incl. 2 meter blasting material hose and double suction pipe (can be inserted into the blasting material bag)

-SP 870 NAD7: Like SP 860 NAD6, but professional version with additional professional equipment (flow control dial for blasting media, compressed air quick adapter, safety glasses, dust mouth guard and 5 kg of blasting sodium hydrogen carbonate for initial use)

-FSP 830 NAD8: Soda blasting unit standard professional injector with suction (low-dust blasting), mobile, required air output 400-800 L / min at 6 bar (the more output, the faster the removal), blasting container 15 liters, delivery incl. chassis, hand bracket, professional soda blasting gun, 1 piece blasting nozzle 6 mm, blasting material hose approx. 2.4 m, LxBxH (without hose)=365x410x810 mm

-Suction devices also available individually for SP 860 NAD6 + SP 870 NAD7!

Sodium blasting units injector, also with suction!

Uniqueness:
-robust soda
-blast gun
-Smooth
blasting method

SODA-BLASTING TECHNOLOGY NEW

THE SPECIAL DINOSAURIER NATRON BLASTING GRITS THE RIGHT BLASTING GRITS FOR EVERY TASK

Special baking soda, sodium hydrogen carbonate NaHCO_3 , for natron/soda blasting technology (high-quality abrasive, not to be confused with simple sodium carbonate, which is not suitable for baking soda).

Soda blasting is a new, gentle cleaning process for removing paint, dirt, mold, fire damage, etc. Environmentally friendly blasting on vehicles, on and in houses, on boats, furniture, antiques, etc.

The surface is not heated during soda blasting and therefore not damaged, even glass, rubber or chrome can be over-blasted. The cleaning effect is created by discharging the surface tension of the individual grain when it hits it, so it is not a sharp-edged and compacting property.

Soda blasting is used in both dry and wet blasting processes. However, wet blasting is only of limited use, as the soda/natron grit then clumps strongly, sticks to the surfaces and leaves a lot of moisture. Another advantage of dry blasting: When used correctly, the surface is then protected against oxidation for a short time (approx. 2 weeks). When wet blasting, the surface is very susceptible to oxidation due to the water content.

TIP: The best way to vacuum the high-quality blasting material is to reuse it.

-Ideal for the gentle refurbishment of aluminum and cast parts: Engine, gearbox, add-on parts, brakes, carburetor etc. With appropriate sealing, even blasting of engines is possible when installed. When working up less air consumption

-Furthermore, you can also paint stripping with the soda jet technology. A slow blasting process in which layers can be removed individually. For stripping, however, increased air consumption

-Soda blasting is poorly suited for rust removal since it does not penetrate the sheet metal

-Crystalline, white and odorless powder, solubility in water 96%, pH value <8.6 (insoluble in oil, fat and alcohol), slight irritation to the eyes, the respiratory tract, the skin and the mucous membranes are possible (please ask for safety data sheet) , use only with protective clothing

-Store in dry, dark and cold rooms, gets damp quickly and then clumps

-Two different sodium abrasives are available for different jobs and guns

-SKG 740 NYB1+742 NYB5+744 NYB10+746 NYB25: Special sodium as a fine ablative blast-and abrasive grit, also suitable for finer surface work, e.g. thin layers of paint, etc., used in all soda/natron guns and the soda/Natron device

-SKG 750 NCB1+752 NCB5+754 NCB10+756 NCB25: Special soda/natron as abrasive, ablative blast-and abrasive grit, for coarse work (with high air performance also faster ablation), mainly used in the more powerful soda blasting guns SP 860 NAD6 + 870 NAD7 and the baking soda FSP 800 SOD5

-Container sizes: 0,7 kg in a bottle (SKG 740 NYB1+750 NCB1), 5 kg in a canister (SKG 742 NYB5+752 NCB5) and 25 kg in a special sack (SKG 746 NYB25+756 NCB25)

SODA-BLASTING TECHNOLOGY NEW

THE NEW DINOSAURIER NATRON BLASTING TECHNOLOGY FURTHER INFORMATION:

Keywords on the subject of soda rays:

- Gentle blasting process
- No surface heating
- No surface deformation
- No surface damage
- For cleaning almost all materials
- Also suitable for stripping paint

Suitable for the following work:

- Processing of aluminum and die casting, e.g. engine parts
- Stripping of metal parts, e.g. Sheets, bodies, railings, fences etc.
- Painting of plastic parts
- Stripping of wood, e.g. Chairs, tables, garden fences, wooden floorboards, parquet, boat hull etc.
- Refurbishment of model cars, toys etc.
- Refurbishment of antiques, armor etc.
- Cleaning suitcases, plastics, linoleum etc.
- Cleaning stoneware, stones, tiles etc.
- Cleaning wall joints

Sodium blasting has existed in large devices for around 30 years. DINOSAURIER-Werkzeuge has now released several small soda jet guns and a mobile soda jet device based on the injector, which can be operated with most compressors.

The soda blasting is extremely gentle on the materials to be blasted and does not penetrate the surface. This means that there is no surface heating, deformation or damage as with the typical "sandblasting", even rubber or plastic can be overexposed. The original surface structure is brought out again by the soda blasting, the parts appear as if they were from the factory.

The sodium abrasive should not become damp.

The application is quite simple: Put the sodium abrasive in the container, connect to the compressor and blast all the desired parts. Don't forget to shake the SP 700 SOD2 and SP 705 NAD3 again and again, because the soda is constantly compacting, then you can radiate wonderfully continuously.

The blasting guns can also be used in a blasting cabinet. If blasting is carried out outdoors, we advise you to vacuum the fine dust and blasting material with an ash vacuum. The extracted blasting material can then be used again.

For the small guns SP 700 SOD2 and SP 705 NAD3, DINOSAURIER tools developed a back suction, ESP 710 RSV1, which can be added later. For the other blasting guns, suckbacks are also developed, please inquire if necessary.

FREE BLASTING UNITS INJECTION

INJECTION FREE BLASTING UNITS FOR WORKING ON OBJECTS

With these models the blasting abrasive is poured into the container and then sucked in. The injection blasting is the slow blasting. For fast work please use pressure blasters f.e. FSK 500 PPA, etc.

- Delivery complete (without compressor and blasting material), including chassis (FS 050 IG), container, blasting hose and hand blasting gun with nozzle, ready for immediate use
- Please note our large blasting accessories program, such as blasting masks/helmets and overalls etc.
- For free blasting with lost blasting material, please use our SKG 300 SLA1. If there is a possibility of recovery by sieving, it is better to use one of our garnet sands
- FS 020 IGA:** Simple, inexpensive hobby version for occasional use, plastic containers
- FS 025 IGB:** Simple, inexpensive hobby version for occasional use, steel containers
- FS 050 IG:** Free blasting device with professional blasting gun (all parts exchangeable, therefore inexpensive to wear), incl. Special sieve for screening dirty blasting material when reused, container made of robust plastic with carrying handle, mobile for flexible working on the object (can also be moved when filled)

For safety reasons they should only be used with 2 people and/or with security switch for emergency stop. (please note the safety regulations).

Free blasting made inexpensive and easy!

SUCTION-BACK KITS

SUCTION-BACK KITS AVAILABLE FOR NEARLY ALL BLASTING GUNS AND FREE BLASTING UNITS!

-NEW! Extend your existing blasting gun or free jet device with a DINOSAURIER suction unit to work almost dust-free.

-For all DINOSAURIER blasting guns and almost all free jet devices, but also for many

Third-party products, there are several suction units, ask for the details

-Retraction units are available in different qualities and price ranges

Version 1: Professional suction version with steel adapter

Version 2: standard suction version with plastic adapter

Version 3: standard suction version with steel adapter

-For retrofitting almost all injector devices. Pressure blasters can also be retrofitted, e.g. FSK 500 PPA.

Simple Chinese pressure blasting devices can also be expanded with a simple modification, see pictures

-All suction units are connected to their own industrial vacuum cleaner, thus one affordable and powerful solution!

-A brush attachment and different rubber nozzles are available for all suction units

-Suck back when blasting can now be expanded easily and inexpensively, also perfect for the hobbyist.

POINT BLASTERS GUNS

Please note when using point blasters or point blaster guns with blast grit recycling:

- Point blasters with blasting material recycling for clean blasting. During blasting a majority of the grit sucked back from the device and reused. Thereby insufficient abrasive loss, the use of high quality blasting medium thus makes sense.
- To flawless grit recycling the blasting material has to be as dry as possible. Work therefore always with a water separator (SKB 720 WSM) on compressor, most also have a further near the blasting gun, should the compressor be further away.
- The blasting grit should not exceed a size of 0.5 mm (better 0.25 mm)
- Point blaster+guns require increased air demand compared to the normal injection blasting
- A blasting spot has a maximum size of 2 cm
- The Point blasting is a very slow blasting, not for surfaces suitable. Therefore is the most abrasive sucked back and not flying around the area. Expensive dismantling of components, e.g. in the engine compartment, thus eliminating the need for doors etc.
- Point blasters to use for security of 2 people

EXAMPLES OF DIFFERENT NOZZLE ATTACHMENTS OF SP 850 SMKL4+SP 890 SMKL7+FS 650 PG3+FS 750 PGP5 (OLD VERSION), FS 710 PGSP3, FS 730 PGPP4, FS 760 PGPP8

FREE-BLASTING GUNS WITH BLAST GRIT RECYCLING

Please see test Oldtimer-Markt magazine 3/2010, pages 178-183.

The recycling guns are conveying the blast grit out of a sack or cup. The grit will be suck back in the sack or the cup. Delivery incl. 4 pieces rubber nozzles

- SP 810 SMKL2: Hobby blast grit recycling gun/Spotblaster with bag. According Oldtimer-Markt: Small, light and handy, quick to fill, good blast power, small blasting-section of about 10 mm, interior fit because almost no dust.
 - SP 820 SMKL3: Hobby blast grit recycling gun with bag and cup. Better version. According test: Solid processed, completely dismantled, easy to filling, good blast power, large blasting-section of approximately 30 mm
 - SP 850 SMKL4: Professional blast grit recycling gun with bag, cup and perfect brush head for even surface blasting even on uneven ground.
- Test winner Oldtimer-Markt Heft 3/2010! According test:** Very high Appearance and grit collection bag closure, high blasting power, hence higher dust, suitable for larger surfaces, blasting-section about 15 mm
- SP 890 SMKL7: New blast gun based on the test winner version SM 850 SMKL4, long for flexible use with 3 m hoses and large brush head. Small built for narrower ranges

POINT BLASTERS HOBBY + STANDARD

POINT BLASTERS HOBBY+STANDARD AND SUCTION ATTACHMENT

-All three point blasters come with a large brush head. This adapts ideally to the unevenness so that only little abrasive escapes. Rubber top nozzles are available as accessory.

-NEW suction attachment with gun also available individually for use on your own blasting unit or even out of a sack. A separate industrial vacuum cleaner can be used to vacuum back

-Light, compact, handy devices with rolls on the frame

-Higher dust generation in the room than with the FS 710/730 and 760 PGPP8 because of the simpler filters in the devices

-SP 100 S, ED 100 ST-5L1+EP 520 FSA: Suction attachment complete

-FS 400 SPE1: New, high-performance model with a huge tank and electric suction (lower air consumption), Delivery incl. Large brush. Rubber inserts also available, without CE-approval

-FS 550 PG2: Device with pneumatic back suction (the air consumption of the blasting is approx. 400 L / min, the suction with an additional approx. 200 L / min), delivery incl. Brush (no point nozzles provided, but DINOSAURIER-rubber nozzles can be adjusted by yourself)

-FS 650 PG3: Same as FS 550 PG, but with high standard blasting gun /test winner at test Oldtimer Markt, magazine 3/2010). Comes with brush and 4 pieces of different rubber nozzles.

BLASTING TECHNIQUE

POINT BLASTERS STANDARD-PROF.

THE NEW ELECTRIC DINOSAURIER SPOT BLASTING DEVICES ADVANCED EQUIPMENT + CHEAP WEAR PARTS!

New, inexpensive point blasting units with electrical suction, in the medium price category with smaller and larger blasting guns. Extensive and improved equipment.
Can be used anywhere where smaller dots and areas have to be blasted, e.g. engine compartment, door edges, window edges etc. and you want to save yourself the effort of dismantling or disassembling components (no blasting material flying around and very little dust development)

- Small, light and handy devices, therefore ideal to take with you on construction sites or in outdoor areas such as swimming pools, cemeteries etc.
- Sufficient tank size of 15 liters despite its compact design.
- Incoming funnel made of plastic for better blasting material flow, no static charge in the funnel
- Unbreakable adapter, high-quality suction hose, inexpensive wear parts
- Delivery incl. chassis, electrical suction, handle, blasting hose 2.0 m, blasting gun with air and blasting nozzle, compressed air quick adapter (FS 730 PGPP4), brush attachment and 4 different rubber point nozzles (round nozzle, nozzles for outer edges + inner edges + side Edge)
- In addition, 4 pieces of rubber nozzles are available for smaller areas (e.g. blasting a screw)
- FS 710 PGSP3:** With standard blasting gun with lower air consumption of 350 L / min at 6 bar
- FS 730 PGPP4:** With a new powerful professional blasting gun (best hand blasting gun) for faster work even in the depth, also blasts thick paint and strong rust, perfect for deep engravings
- Beware that spot blasting is a slow blasting. The beam point is approx. 2 cm in diameter and can be drawn in a line. Therefore it is better to use it only for small areas!
- Compressed air regulator and dehumidifier (maintenance unit) on the compressor also necessary
- For the use of blasting media up to max. 0.25 mm, e.g. SKG 070 NK2, SKG 125 GSG3 or SKG 130 GSG4. As an exception if the blasting material SKG 300 SLA1 is lost

POINT BLASTER PROFESSIONAL

THE NEW ELECTRIC DINOSAURIER SPOT BLASTING DEVICES ADVANCED EQUIPMENT + CHEAP WEAR PARTS!

New, inexpensive point blasting units with electrical suction, as a further development of our previous FS 750 PGP5. Extensive and improved equipment.
Can be used anywhere where smaller dots and areas have to be blasted, e.g. engine compartment, door edges, window edges etc. and you want to save yourself the effort of dismantling or disassembling components (no blasting material flying around and very little dust development)

- Small, light and handy devices, compared to the previous FS 750 PGP5, therefore ideal to take with you on construction sites or in outdoor areas such as swimming pools, cemeteries etc.
- Practical handle for easy lifting and chassis for easy moving
- Sufficient tank size of 15 liters despite its compact design.
- Modern design with tapered funnel for better flow of grit
- New powerful professional blasting gun (best hand blasting gun) for faster work even in the depth, also blasts thick paint and strong rust, perfect for deep engravings
- Unbreakable adapter, high-quality suction hose, inexpensive wear parts
- Quiet and powerful suction (blasting material can be sucked back almost completely from the blasted area), for extremely dust-free blasting
- Delivery incl. chassis, electrical suction, handle, blasting hose 2.0 m, professional blasting gun with air and blasting nozzle, compressed air quick adapter, brush attachment and 4 different rubber point nozzles (round nozzle, nozzles for outer edges + inner edges + side Edge)
- In addition, 4 pieces of rubber nozzles are available for smaller areas (e.g. blasting a screw)
- Beware that spot blasting is a slow blasting. The beam point is approx. 2 cm in diameter and can be drawn in a line. Therefore it is better to use it only for small areas!
- Compressed air regulator and dehumidifier (maintenance unit) on the compressor also necessary
- For the use of blasting media up to max. 0.25 mm, e.g. SKG 070 NK2, SKG 125 GSG3 or SKG 130 GSG4. As an exception if the blasting material SKG 300 SLA1 is lost

PRESSURE-BLASTER PEOFESSIONAL

THE NEW CONVENIENT DINOSAURIER-PROFESSIONAL-PRESSURE BLASTER; NEW! FOR USE WITH SMALL COMPRESSORS!

Innovation: At last a favorable professional pressure jet unit can be used by means of compressor from 500 to 1000 L / min at 6 bar output power to operate (in short supply). So far, medium screw compressor was always an expensive, necessity!

- Stocking, light and handy device with CE approval
- Large tank size of 25 litres despite the compact design. With a power consumption of approx. 1kg / min (with very fine grit) you can blast for about 15 minutes (coarse grit and high pressure only a few minutes)
- Delivery with chassis (diameter of wheels 150 mm), handle, manometer, moisture drain valve, pressure relief valve, pressure air jet tube (length 3,5 m, outer diameter 26 mm), quick coupling at the blast tube, solid opening knob at the lance (length 400 mm, outer diameter 16,6 mm, inner diameter 10 mm) and wolframcarbide nozzle (4,3 mm, long life). Attention no dead man's switch, therefore use only with 2 people
- Compressed air regulator and dehumidifier (maintenance unit) on the compressor also necessary
- Despite the small nozzle, much higher blasting power and greater removal than with injector free jet devices (thus faster work possible, but not as fast as with large pressure blasting devices)
- For the use of blasting media up to max. 0.5 mm grain size, e.g. SKG 300 SLA1
- NEW:** You can equip the pressure blaster with larger nozzles (please note increased air capacity) and also with a blast gun. If needed, please request parts list.
- NEW:** Back suction adapter developed with brush, for low-dust blasting!

New: professional pressure blaster for use with smaller compressors!

Type	Article description	Tank-size	Required air consumption	Weight
FSK 500 PPA	Pressure blasting device Prof. 25 liters, small, handy and light, novelty: Can already be used with a medium compressor, air consumption approx. 400-800 L / min at 6 bar, large capacity of the pressure vessel up to 25 liters, LxWxH (without hose) = 380x510x1.045 mm	25 Litre	400-800 L/min.	20,9 kg

BLASTING TECHNIQUE

PRESSURE-BLASTERS PEOFESSIONAL

THE NEW DINOSAURIER PROFESSIONAL PRESSURE BLASTERS NEW! NOW BETTER EQUIPPED AND CHEAPER!

Novelty: The better equipped professional high-performance pressure blasting units, at a lower price! Now also available in four different tank sizes!

-All devices incl. security remote control (thus CE-approved), chassis, blast grit-dosing valve, water filter (filtering out up to 98% water and oil), hose coupling, nozzle holder and Venturi-nozzle tungsten carbide (service life up to 400 hours)

-FSN 2025N HLPT2+FSN 2050N HLPT3: Delivery incl. pneumatic remote control incl. 5 m control hose and hand lever, 5 lfdm blast grit hose 13x27 mm, blast nozzle 5,0x45 mm, (additional possible nozzle sizes 3,5/6,5/8,0 mm). Note: These small devices should only be used for occasional work and only be operated with fine blasting material (e.g. SKG 300 SLA1, otherwise risk of blockage), otherwise it is better to choose the larger devices (e.g. FSN 2104 HLPT4)

-FSN 2104N HLPT4+FSN 2206N HLPT6: Delivery incl. pneumatic remote control incl. 20 m control hose and hand lever, 20 lfdm blast grit hose 25x39 mm, blast nozzle 6,5x130 mm (additional possible nozzle sizes 8,0/9,5/11,0/12,5 mm). Also available with a more wear-resistant and more wear-resistant pinch valve for the use of metallic abrasives for an additional charge

-Air consumption min. with blast nozzle: 3,5 mm=900 L/min., 5,0 mm=1.500 L/min., 6,5 mm=2.300 L/min., 8,0 mm=3.900 L/min., 9,5 mm=5.500 L/min., larger nozzles correspondingly higher

-All devices complete ready for use, both without compressor and blast grit

-Extremely higher beam power and greater removal than with injector devices, for faster work

-Note: We strongly advise you to set up this device on site by a blasting specialist and have it blasted (we can arrange a specialist for you). Due to the size of the article, slight defects in the lacquer can occur during construction, assembly and packaging

Professional pressure blasters with complete equipment at a low price!

ACCESSORIES FOR FREE BLASTING

THE NEW DINOSAURIER ACCESSORIES FOR FREE BLASTING NEW HIGH QUALITY AND CHEAPER!

We can offer a new free-blasting equipment at a lower price to you now!
The necessary protection against blasting material that rebounds.

-HK 150 FS+HK 230 FS3: Basic hoods for the occasional use. Only cover the head and top shoulders. The visor cannot be opened. Viewing window exchangeable, without CE-approval

-HK 350 FS: Blasting hood Standard-Prof., Better hood covers more of the body for better protection. Also covers the breast area. Incl. ventilation connection to ventilate the gear and visor, Exchangeable windows, incl. plexiglass and glass.

-HKP 600 FSW5: Spotlight helmet professional with nylon cape, light and comfortable, wide and curved viewing window, easy and precise lockable with snap locks, two protective glasses and a wire mesh sieve ensure clear visibility when blasting, interchangeable outer and inner glass, robust construction for high user safety and long service life, constant air flow to the viewing window to prevent fogging of the viewing window, delivery incl. pressure regulator, air flow indicator and permanent cape attached to the helmet, is suitable for all blasting work, CE approved

-ALF 30400 HKP2: Breathing air filter system for supplying the helmet with fresh air, designed to remove condensate and up to 98% particles of a size of 0.5 micron or smaller (does not protect against carbon monoxide / CO or other toxic gases, gas monitor and special filter advisable), equipped with pressure regulator, pressure indicator, safety valve, condensate outlet valve, either floor or wall mounting.

-AKG 30350 HKP5: Breathing air conditioning unit cold / warm, principle of air flow separation, serves to cool or warm the breathing air that is supplied to the protective helmet by the breathing air filter, adjustable outlet temperature can be up to 20 ° C above or below the inlet temperature

-ALS 30900 HKP8: Breathing air hose, 40 running meters. (also 20 running meters available), 9.5x18.5 mm, is attached between the protective helmet and breathing air filter, special hose made of non-toxic materials, extra high wall thickness prevents the hose from kinking

-HSK 651/50 MS1 following: Light blasting overalls for short missions and auxiliary personnel at the blasting location, size 50 (S), machine washable, zip and Velcro fasteners (on arms and legs) for double dust protection, delivery including protective gloves, also in sizes M (52), L (54), XL (56), XXL (58) and XXXL (60) available.

-HSK 721/50 PS1 following: As before, but with professional jet overalls including leather gloves, arms and legs additionally protected by leather attachments, the back can breathe freely thanks to the heavy but breathable cotton fabric, which increases comfort, double seams for greater stability, zippers, Velcro fasteners and elastic seals (on the arms and legs) for double sealing (dust protection)

**BLASTING
TECHNIQUE**

ACCESSORIES FOR FREE BLASTING

Blasting guns and blasting heads are subject to high wear on all components. They have a limited lifespan because the blasting material touches components and thus leads to wear. Blasting nozzles and air nozzles (located behind the blasting nozzle for injector guns) are the most frequently replaced parts. Due to an extremely long service life, the higher load capacity and a constant air performance, we advise you to buy high-quality tungsten or boron carbide nozzles (depending on the type). The required air outputs are the minimum data, depending on the nozzle size they are also higher.

BLST GUNS, NOZZLES, NOZZLES HOLDERS, PRESSURE HOSES FOR PRESSURE BLASTERS OF ALL KIND

- SP 910 KGH: Ball valve complete incl. connections and a ceramic nozzle
- SP 900 FSD+SP 920 FSK+SP 980 FP: Pressure blasting guns SP 900 FSD und SP 980 FP with special kipp-closing mechanism, many different nozzle sizes and types available
- SST 120 SP813+SST 150 P1622+SSL 2201 DG1-27: A lot of pressure hoses Hobby and Prof. available, also in different sizes, connection types and lengths
- ESN 2710 HD-27: Holder for pressure nozzles in different sizes available
- EDA 2802 NKWO-6,5: Venturi-pressure nozzle. Huge range of tungsten and Borocarbide nozzles in many sizes and types, also with rubber coating

ACCESSORIES FOR BLAST CABINETS

INJECTION HAND BLASTING GUNS FOR BLASTING CABINETS

The injection hand blasting guns are suitable for free blasting. The connecting hose can be placed in a bucket. All blasting guns are delivered with a nozzle (ceramic or steel depending on the type). We recommend the purchase of tungsten or boron carbide nozzles (depending on the type) - due to an extremely long life and because of their extreme reputation for being virtually unbreakable they are therefore in the end cheaper than a ceramic nozzle. Be aware that behind the blasting nozzle the air nozzle is also subject to wear and tear. Blasting guns have a limited life. When the blast grit comes in contact with the blast parts they wears out. Blasting guns and accessories are sold in the rule without hose or connections, besides SP 120 SP and SP 150 P.

- SP 100 S: Hobby-blasting gun with a large selection of nozzles
- SP 110 SA: Robust standard blasting gun, **NEW: Durable blasting nozzle now also available!**
- SP 120 SP: Professional blasting gun with lower consumption. Delivery incl. Blasting material hose and blasting agent suction pipe, ideal for immediate blasting
- SP 150 P: Best professional hand blasting gun. Delivery incl. blasting material hose and blasting suction bell (creates a strong suction effect with impulses), making it ideal for immediate free blasting
- SP 200 SPF: Blasting gun, also perfect for free blasting (included by FS 050 IG), easily dismountable, very robust quality, **NEW: Different durable blasting nozzles now also available!**

BLASTING TECHNIQUE

ACCESSORIES FOR BLAST CABINETS

INJECTION BLASTING HEADS FOR BLASTING CABINETS

The blasting heads can only be used with foot control (SKB 410 FBN and SKB 450 FB), because they do not have a manual control. The blasting head are therefore smaller and more handy. For example they can be hung up on the cabinet ceiling so you have your hands free to hold the parts whilst blasting. With blasting heads you also can build up a blasting-street (multiple blast heads in a line). All blasting heads (except SP 400 DP / DPKS5) are supplied without a blasting nozzle. Due to an extremely longer service life (ultimately less expensive than ceramic nozzles) and the higher load capacity (no risk of breakage), we advise you to purchase high-quality tungsten nozzles or boron carbide nozzles (depending on the type). Delivery incl. compressed air and blasting connections

- SP 300 FP:** Handy special blasting head with hanging eyelet + handle. Well-known model on the market
- SP 350 P2:** Like SP 300 FP, but more robust professional model
- SP 400 DP:** Special blasting head Standard-Profi, good performance, also available as SP 400 DPKS5, then completely ready for connection incl. all hoses and connections (direct connection to SKB 450 FBN)
- SP 500 P:** Special blasting head professional with a flat entry angle for optimum blasting (ca. 30°)
- SP 600 P4:** Like SP 500 P, but larger and more robust professional model
- KE-nozzles:** Basic ceramic nozzle with little durability and risk of breakage
- WO-nozzles:** High quality special wolfram nozzle for long Standzeit. For the ED 500 WO you must use the attachment-nozzle ESP 501 P. If not at hand please order
- BO-nozzles:** Hardest special borcarbide nozzle for the longest durability.

For each use the perfect injection-blast head!

ACCESSORIES FOR BLAST CABINETS

ACCESSORIES AND SPARE PARTS FOR BLASTING CABINETS OF ALL TYPES; BUILD YOUR BLASTING CABIN YOURSELF!

DINOSAURIER has a huge spare and wear parts warehouse for blasting cabinets. Replace your defective wear parts, change and improve your blasting cabin or build your own blasting cabinet, we deliver the right part for all scopes of application!

-SKB 410 FBN+450 FB: Foot actuations for all jet heads (these can only be operated with a foot actuation, since they do not have a manual release), SKB 410 FBN delivery complete including hoses, connections and safety cover, SKB 450 FB without hoses, incl. connections

-SKB 265 STP1+267 STP3+268 STP4: Blasting stops for retrofitting a blasting cabinet (interrupts the blasting process when the door is opened (safety aspect), SKB 265 STP1 electrical without connections, SKB 267 STP3 + 268 STP4 complete including hoses. Approval in cabins must be checked

-Druckregler und Wasserabscheider: Each blasting cabin needs a pressure regulator and water separator on the cabin. The pressure for the blasting gun must be regulated as close as possible to the cabinet. An additional water separator (normally at least 2 pieces required) on the cabin filters out moisture so that the blasting material cannot clump.

ACCESSORIES FOR BLAST CABINETS

GLOVES FOR ALL BLASTING CABINETS

- SH 100 VN:** Very thin vinyl gloves to wear under blasting gloves. Not sterile!
- SH 400/600 KU:** Lined plastic, cuff very big, but hardly stretchable. SH 400 KU fitted in SK 200-series, SH 600 KU in SK 500+1340/45+1545-series.
- SH 400/600/810 LN:** Quality latex gloves, stretchable, can be repaired like bicycle tyres. (Attention! Make sure that gloves are completely sealed!)
- SH 620 LP1+820 LP2:** New professional natural-rubber-gloves, without seam inside lined with cotton
- SH 630 LP3+830 LP4:** As before, however, right + left glove identical, so gloves can also be changed (less wear), inside lined with cotton
- SH 600 PVSA6+SH 400 PSA2+SH 600 PSA3:** New blasting gloves, CE certified according to PSA directive EN 388 + EN 374
- The cuffs are stated in the table without guarantee
- Achtung:** Blasting gloves are prone to radiation and low temperature and can break, even without use

ACCESSORIES FOR BLAST CABINETS

PROTECTION FOLIOS FOR LIGHT AND VIEWING WINDOWS OF BLAST CABINETS OF ALL KINDS AND SIZES

Protective adhesive films for protecting the viewing windows from the inside, absolutely indispensable! Protect the expensive viewing window and light units!

- SKF 610 LK+620 EK+625 EK+627 EK6+628 EK7**: Folios incl. tape for all kind of windows, they can also be cut to fit onto lighting unit windows
- SKF 630 RK**: Protective folio on a roll for flexible use. Nearly all sizes of folio for different viewing windows can be cut to fit. Delivery with small double sided tape.
- SKF 640/643/647/649 KS**: Thick acrylic plates (organic glas) 1,0 mm, for long lasting value.
- SKF 650 PG**: Thick acrylic plate for cutting to the correct size for long lasting value

PROTECTION PANES FOR BLAST CABINETS

Replacement panes for blasting cabins of all types (also for similarly designed foreign cabins)!

- SKF 655 KS3**: Plexiglass pane for top door of the SK 200 H / HP + CE versions, including pre-drilled holes for easy installation, transport protection film on both sides, LxWxD = 529x435x3 mm
- SKF 775 KS5**: Plexiglass pane as used for the viewing window of the SK 1545 NBA5 / 1560 NB-CE8 / 1565 NBA-CE9, without holes, transport protection film on both sides, LxWxD = 740x360x1.5 mm
- SKB 720 KSP3**: Replacement pane of plexiglass as viewing window for SK 300 H / HS, incl. 1 piece of protective film, corners slightly rounded, LxWxH = 575x280x2.2 mm
- SKB 750 EGS**: Replacement glass pane for light unit of the SK 500 H/HS und SK 1340 NB/1345 NBA/1360 NB-CE4/1365 NBA-CE5, edges not ground, LxBxH=611x300x4,9 mm
- SKB 760 EGLS2**: Replacement glass pane for light unit of the SK 1340 NB / 1345 NBA, / 1360 NB-CE4 / 1365 NBA-CE5, edges not ground, LxWxH = 661x155x4.9 mm
- SKB 770 EGLS5**: Replacement glass pane for front door SK 1545 NBA5 / 1560 NB-CE8 / 1565 NBA-CE9, edges not ground, LxWxH = 728x360x5 mm
- SKB 775 EGLS7**: Replacement glass for light box SK 1545 NBA5 / 1560 NB-CE8 / 1565 NBA-CE9 edges not ground, LxWxH = 990x345x5 mm

ACCESSORIES TIGHT PROFILES

DINOSAURIER RUBBER SEALS FOR BLASTING CABINETS + VEHICLES

Rubber seal, sold by the meter, different types and sizes, for sealing of eg blast cabinet doors. Rubber seals can be partially used as automotive gaskets. Also complete rubber seals available for offered blast cabinets + additional seals.

- ESK 1380 DGF**: Complete sealing rubber foam (e.g. for front flap blasting cabinets SK 1340 NB + 1345 NBA), self-adhesive, total length 2000 mm, width 20 mm, thickness 3.8 mm, weight 6 gr.
- ESK 1381 DGS**: Complete sealing rubber foam (e.g. for side door blasting cabinets SK 1340 NB + 1345 NBA), self-adhesive, total length 2,000 mm, width 22 mm, thickness 11 mm, weight 40 gr.
- ESK 1405 TDF2**: 1 running meter black door seal, hollow profile, (e.g. used on the front flaps of the blasting cabinets SK 300-1200 models), diameter 17.4 / 16 mm, wall thickness 3 mm, weight 34 gr., **can also be used as a car seal (e.g. similar to Alfa Romeo trunk lid)**
- ESK 1415 TDF4**: 1 running meter white door seal, hollow profile, (e.g. used on the side doors of the blasting cabins SK 300-1200 models), diameter 22 mm, wall thickness 3.8 mm, weight 44 gr.
- ESK 1500 TDF10**: 1 running meter Seal (as installed on the front door of the blasting cabinet SK 1545 NBA5), hollow seal with triple toothed retaining groove (2xright, 1xleft) made of rubber incl. Metal inserts on the side for stabilization, for vertical attachment to the profile, total height 33 mm, height retaining groove 17 mm, Height seal for compression 16 mm, width seal 14 mm, width retaining groove 10 mm, weight approx. 275 gr., **can also be used as a car seal (e.g. similar to Maserati)**
- ESK 1505 TDF12**: 1 running meter Seal (as installed on the lighting box of the blasting cabinet SK 1545 NBA5), hollow seal with a single toothed retaining groove made of rubber including side metal inserts for stabilization, for lateral attachment to the profile, total height 21 mm, height retaining groove 8 mm, height seal for compression 13 mm, Wide seal 16 mm, width retaining groove 14 mm, weight approx. 212 gr., **can also be used as a car seal (e.g. similar to Alfa Romeo door, still with light velor application)**

CONSUMABLES BLAST GRIT

BLAST GRIT

- From the blast grit the result of the blasting operation depends. Wrong blast grit not only provides a bad result, but can also damage the object to be blasted. We supply you the basic blast grit exclusively in high quality grades.
- The deliverable blast grit of DINOSAURIER-Werkzeuge has been tested in their own test, to be able to determine optimum applications. Test report can be requested by mail.
- We sometimes only have one grain size in the standard range, as this has turned out to be the most sensible grain size and meets almost all requirements. Of course, many other grain sizes are also available on request
- Please note the different bulk density of the blast grit. A high bulk density will be a problem with injection blasting, because the vacuum principle can not suck the heavy blast grit. This often means that either not grit sucked or only intermittently. During pressure blasting this is no problem.
- The DINOSAURIER glas bead, normal corundum, garnet sand and walnut shells are to injection blasting ideal. These blasting grits are perfect for use in blast cabinets, for free blasting machines and for spot blasting articles with suction back.
- The DINOSAURIER-slugs are tested and are usable for injection or pressure blasting, please see table. Please make sure that a pressure blast grit can not be used for injection blasting. For injection blasting best use is the SKG 300 SLA1.
- The blast grit is supplied in special bags of 25 kg. Single bags will be shipped in special cartons by UPS. **NEW:** Now bottlings available on request. Volume delivery by forwarder in the special bags on a pallet. Tons of goods and quantity prices please query.
- When blasting, please always consider the pollution of the environment due to the unavoidable abrasive dust (in general, please observe the blasting guidelines)
- Glass beads SKG 150 GP1+SKG 250 GP3:** Synthetic, mineral multiple blast grit for the most part for surface work and for **cleaning and polishing** (f.e. for aluminium-und casted parts). Spherical and there-fore very gentle working. Retains ist particle form even during multiple use, thereby ensuring consistent effiacy. Store dry. Very fine grain forms for a perfect and smooth result, processing up to max. 4,0-4,5 bar
- Normal corundum brown SKG 070 NK2:** Extremely high-quality multiple blast grit for wet and dry blasting for professional use (no fluctuations in quality). Very hard, extremely stand firm (up to 20 rounds at small grain sizes), iron-free blasting media for highest demands with low dusty. **Ideal to derust and depaint**, also on aluminium parts applicable. Very fine grain forms for a perfect and smooth result, processing up to max. 6,0 bar
- Garnet sand SKG 125 GSG3+SKG 130 GSG4:** Multiple blasting media for wet and dry blasting. Inactive and non-metallic minerals of natural garnet sand. Gentle, economic and powerful blast grit means. For achieving optimum cleaning results, in compliance with the least possible loss of substance on the surface to be processed, since very fine grain. Very fine grain forms for a perfect and smooth result, processing up to max. 6,0 bar. **Ideal to derust and depaint**
- Slags SKG 300 SLA1+SKG 400 SLM1+SKG 500 SLH1:** Disposable blast grit for free blasting, when blast grit is lost. Synthetic, mineral blast grit, grain shape edged with strong erosion. Should be stored dry. SKG 300 SLA1: Aluminiumsilicate glass melt, black, finest slag, best slag for injecor and pressure blasting with small nozzles (1. choice for injector blasting), SKG 400 SLM1: Slag from copper production, black, coarse grain form (lager nozzle sizes necessary), only suitable for pressure blasting, SKG 500 SLH1: Blast furnace slag, light, coarse grain shape, for use as injection and pressure blating grit if nozzles are big enough, suitable **for removing rust and paint**.
- Nutshells granules SKG 0204 NUS1+0410 NUS2+1317 NUS2:** Extremely soft, organic, edged reusable blast grit from broke, cleaned and sifted walnut shells. **To clean without loss of substance of the cleaning part**, z.B. combustion chambers of engines. Also for polishing of chroming (f.e. chrome bumpers) suitable. No iron parts, very easy.

DINOSAURIER-WERKZEUGE GENERAL TRADING CONDITIONS OF PAYMENT&DELIVERY

1. General

Delivery and Trade are exclusively to be carried out under the terms of our conditions of payment and delivery conditions. Any other buying conditions of the purchaser or trader will not be recognised unless there is a written agreement between the two parties. These conditions of delivery and payment are valid for all future transactions from business connections, without the further need to refer to the individual terms of the agreement. Conditions of the Purchaser and variations to agreements will only become effectual after a written statement has been received by the client. Acceptance of the terms of conditions sent to us can not be recognised by our silence or by our execution of a contract. In addition to our general business conditions, where it is applicable the license conditions of the manufacturer of the products must also be observed. All product names and logos are the property of the respective manufacturers. The data and the descriptions given by us in respect to the machines and products that we distribute are not binding. With regard to constant technical innovation and improvement of our products, any changes in the construction and finishing of our products may not be carried over into our printed matter or online catalogue.

2. Offers, Orders

Our offers are subject to confirmation. The customer gives with his order a binding proposal until the contract of purchase has been completed. Orders can be placed in writing, over the telephone, by bidding in the internet or through the online shop. The purchaser's order is only binding after a written confirmation two or three weeks after the first approach. The sending out of the ordered goods or an invoice to the customer is the same as an explicit receipt of goods. Additional agreements, changes, supplements etc. require our written confirmation. So long as written correspondence is processed through the computer system it will be executed without a signature (i.e. per e-mail) and is sufficient for the written requirement.

3. Prices

Prices are subject to change up to the day of the order. The calculation that follows on this day is subject to normal market prices and reductions. All our prices are net prices. The value added tax as well as any further services (transport costs, packaging etc.) will be accordingly additionally calculated.

4. Delivery

All deadlines and delivery dates are not binding unless explicitly otherwise agreed. If our un-binding delivery dates are actually substantially exceeded, we will inform the buyer immediately. By payments of „cash before delivery“, the delivery time starts when the total price is paid. An exceptionally otherwise agreed delivery time is valid (subject to confirmation) unless unforeseen events for example in the case of force majeure (an act of god) or an otherwise agreed delivery time is delayed or the normal operation of one of our delivery agents is disturbed. Partial deliveries are permissible. Every reasonable partial delivery is regarded as a valid individual delivery.

If the provision of services is impossible or unreasonable we reserve the right to withdraw partially or fully from the agreement.

This includes the case of an increased delivery time in which the handling of the offer in question incurs costs that were not part of the underlying agreement. In the case that the placer of the order is subjected to an unreasonable delay in the delivery time then a withdrawal from the agreement is permitted.

The buyer can withdraw from the contract if it becomes impossible for us to fulfil part of the delivery and there is a valid claim that a partial delivery is not acceptable. In all other cases the right to withdraw from the agreement is limited to the part in question if by an objective assessment the original contract is not affected.

In all the above named cases we are not liable for damage caused by the party that placed the order. This is not applicable for damage caused by the placer of the order or his/her employees to the life, body or health of our company manager or any of his employees, for damage of a premeditated nature or for damage caused by negligence. Any withdrawal from an agreement must be put into writing.

5. Transfer of Risk

Risk is transferred when the delivered parts are sent to the party that placed the order or when partial deliveries take place or when we have offered other services i.e. delivery costs or the carriage and assembly. If the delivery is delayed by circumstances which the party that placed the order is responsible for, then the risk is transferred to the party on the day that the goods were ready for delivery. However we are obligated to the other party that their goods remain insured at the expense of the buyer on their request.

6. Delivery

The delivery follows at the risk and the cost of the party that places the order. The delivery regulations of the customer are only binding when a written agreement exists.

7. Payment

Our invoices are payable by agreement of cash before delivery or cash on delivery as long as no other arrangement has been agreed. Delivery abroad will only follow on payment of cash before delivery. A payment is first recognised when the amount is at our disposal. In the case of cash before delivery the payment should be made within five days after the receipt of our confirmation of the order. Definitive is the point at which the money is received by us. If the payment is late we are entitled to re-call the offer. This includes the cancellation of a contract of purchase from an online auction.

In the case that the goods are refused on delivery by payments of cash on delivery we withhold the right, when the contract conforms to the normal conditions of delivery, to charge the customer with the ensuing charges plus a processing charge of € 15.00. The customer is only entitled to withhold payment or to warrant compensation for any possible claims as long as these are undisputed or legally proven valid.

8. The Right of Return by the Consumer

As required by law the consumer has the right to return delivered goods that have been purchased or auctioned in the internet or by bought other means of communication without being required to give any reason within two weeks. This time period begins with the receipt of the goods and these instructions. To keep to the terms of the time period it is sufficient that the return of the goods starts within this period. The goods must be sent back to us in a complete and sound condition, insured and sent to us in an undamaged package. An uninsured packet will only be accepted when the contents are small parts or of little worth which the customer didn't receive as insured goods. Goods with a price of € 40.00 or more can be returned at our cost and by a worth of up to € 40.00 at the cost of the customer. When returning goods it is necessary to inform us by any means of communication. Returning goods without informing us causes considerable complications and can cause a delay in the return procedure. We withhold the right, when the product is not in its original packing or shows clear signs of having been used in an inappropriate manner to assign a depreciated value to the marked goods. The amount to be reimbursed will then be reduced to the depreciated value ascertained by us.

9. Retention of Title

We withhold the property rights to all delivered goods until the entire amount has been paid. The retention of property rights remains until all demands that we have with the buyer in relation to the goods in question have been satisfied i.e. owing to repair or delivery of replacement parts as well as other services that have been acquired after purchase. All deliveries are considered part of a connected delivery business. With open invoices the retention of title applies as a safety device until the balance of payments is made and all demands which we have in relation to the current business with the buyer have been met. Upon the request of the buyer we are obligated to renounce of the retention of title but only if the buyer has fulfilled all outstanding demands in connection with the object of the purchase and for the remaining business relations an appropriate safety net is withheld. If our goods are connected by the customer to other articles to form a uniform object, we will retain the property of the product resulting from the installation in relation to the value of our goods. It is considered as agreed upon that the customer keeps the article in question for us in safekeeping. The customer is entitled to sell the commodity in the normal course of business. In this case he hereby now surrenders it up to complete re-payment with any demands and from the entire business relation that may occur with his customer with all rights to us. The buyer is responsible that the third party is indicated of this retention of title, extended retention of title and assignment in advance. In the case that the purchased object is connected to another article to make a unified object and sold to a third party the orderer must concede a part of the purchased unified object from the further sale with the corresponding value of goods from the object in question. Also here the buyer is responsible that the third party is indicated of this retention of title, extended retention of title and assignment in advance. The buyer is obligated to give us out the necessary information for us to assert our rights and to hand over pertaining documents. The buyer may not pawn or transfer the goods as a safety measure. With confiscation as well as seizures or other orders by a third party the buyer must inform us immediately.

10. Warranty

We ensure that the delivered articles are free from material defects, corresponding to the respective technical state of the art. For defects due to delivery and to which the failure of assured property applies, we are responsible as follows under exclusion of further requirements: As long as the defect of the bought goods stems from us, the buyer can demand according to § 439 BGB depending on his choice a reimbursement for the defect or a new delivery without any defect. We can refuse the kind of the implementation of the decision selected by the buyer, if it is not possible without disproportionate costs for us. We reserve the right not to supply an article in if it is no longer available but instead a comparable, technically equivalent article. The discovery of any defect is to be made known to us immediately in writing. Any replaced parts become our property.

If reworked items or replacements should fail, the possibility exists of lowering the remuneration or of the buyer cancelling the contract. Defects, which result by inappropriate start-up, or from unsuitable or inappropriate use, from incorrect treatment or neglect of our installation and servicing instructions, are excluded from the guarantee. We accept no further liability for damage to articles, which is caused by contamination or corrosion or by an appropriately timed natural wear and tear. With the resale and distribution of our products in a loose and thus not original packaged condition we are also relieved of any guarantee. Data given in catalogues, price lists and information brochures does not mean a guarantee of correct details. Claims for damage from the buyer because of lack of supply, in particular, requirements due to replacement or damage, which did not occur on the delivered article, are out of question. This non-liability clause does not apply with intention or gross negligence by our managing directors or from our employees and in cases, in which the product liability law applies to failures in delivered articles to persons or property on privately used objects. It also doesn't apply by the failure of properties that are explicitly assured when the assurance is used by the purchaser for damage that didn't occur on the delivered object. Claims for damage where the obligations of the user have not been fulfilled or from un-permitted use as well as claims for requirements of extra expenditures are out of the question both for us for our legal assistants, unless that damage was caused deliberately or by gross negligence. This restriction does not apply to the violation of contractual obligations as well as to personal injuries and to damage, which is based on the error of a guaranteed feature nor is intended where the product liability law applies. Unforeseeable damage and defects are not excluded from liability unless the damage was deliberately caused. The guarantee period applies to a period of 2 years with consideration to the burden of proof reversal, except with expendable material. It begins with the arrival of the commodity with the customer. For the case of the sale of used items with material defects liability is limited to the term of one year. Unless otherwise expressly agreed, proceeding liability claims from the purchaser - independent from argument - are not negotiable.

11. Objections and Returns

Obvious defects are to be indicated after receipt of the goods immediately in writing. If a defect occurs later than six months after delivery, the customer has to provide proof that the item was unsatisfactory at the transfer of risk (the burden of proof of reversal). The buyer is obligated to send the article back to us with a description of the defect and in accordance with the received instructions. The buyer is further obligated to insure the safety of his data. With an unwarranted complaint we reserve the right to charge for the additional work from the ensuing test measures, the amount being dependent on the expenditure, with a least charge of € 15.00. Furthermore the forwarding expenses resulting thereby are to be refunded to our account in this case before the return of the examined goods.

12. Data Protection

In accordance to the data protection act we would like to indicate that we store data about our customers in the context of a better working relationship.

13. Cancellation and wrong orders

If an order is cancelled due to a wrong order and if the cancellation is accepted by us, the customer is obligated to perform a payment of damages at height of 20% of the purchase order value, subject to the demand of a higher payment of damages under allocation of the effectively suffered damage.

14. Place of delivery and area of jurisdiction

The place that the contract is to be fulfilled for all deliveries is the respective place of departure of the goods, and for all payments it is the registered address of the buyer. If the buyer is a full trader, a legal entity of the public law or a public special estate, the area of jurisdiction deviating from a legal sentence 1 is in each case Hamburg. We are however entitled to complain to the head office of the orderer.

15. Final clauses

We would point out that any inappropriate operation of our tools will result in the danger of injury. We therefore ask you to read our tools product descriptions and operating instructions carefully. Always consider all legal regulations in handling tools and machines. Keep children away from all tools and machines. If individual regulations of these general trading conditions should be or become ineffective, this does not affect the effectiveness of the remaining general trading conditions.

For all purchases made with us the rights of the Federal Republic of Germany apply exclusively. The validity of the UN Purchase rights is not recognised. Sales to the USA are likewise not permitted. If the customer is a consumer, then the compulsive consumer protection regulations are applicable, in the place, to which the customer has its usual place of residence. You will find our conditions on our website at www.dinosaurier-werkzeuge.de
